

Sia made two transactions on her bank account last week. She made a withdrawal of \$184.60 and a deposit of \$98.55.

1. Write a value that could be used to describe each of Sia's transactions.

Transaction	Value
Withdrawal	
Deposit	

2. Use an inequality symbol, $>$ or $<$, to compare the absolute values of Sia's transactions.

|_____| _____ |_____|

3. What does this inequality statement indicate about the total change in Sia's bank account last week?

On April 6th, 2020, two baby giraffes were born at the Miami zoo to two different female giraffes, Mia and Zuri. Mia's calf was 49 pounds above the average newborn giraffe weight, while Zuri's calf was 13 pounds below the average weight.

4. Write a value that could be used to describe each calf's weight in relation to the average.

Calf	Value
Mia's calf	
Zuri's calf	

5. Use an inequality symbol, $>$ or $<$, to compare the absolute values.

|_____| _____ |_____|

6. What does the inequality statement indicate about which calf is farther from average weight?

In 2020, the country with the greatest increase in population by percent was Niger, with an increase of 3.84%. The country with the greatest decrease was Lithuania, with a decrease of 1.35%.

7. Write a value that could be used to describe each country’s net change in population by percent.

Country	Net Change in Population by Percent
Niger	
Lithuania	

8. Use an inequality symbol, $>$ or $<$, to compare the absolute values of the population changes by percent for each country.

|____| ____ |____|

9. Which country’s population changed more by percentage?

10. The table shows the elevations of three locations in Florida.

Location	Elevation
<i>The Eagle</i> Shipwreck	–110 feet
Disney World	92 feet
Britton Hill	345 feet

For each pair, write an inequality statement using $<$, $>$, or $=$ to compare their distances from sea level.

Locations	Inequality Statement
<i>The Eagle</i> Shipwreck vs. Disney World	
<i>The Eagle</i> Shipwreck vs. Britton Hill
