

Grade 6
Unit 4
Lesson 12 Practice

Name Answer Key
Date _____
Period _____

The coffee shop is 5 blocks East of Amber's house. The park is 3 blocks West of Amber's house.

1. Model Amber's house, the coffee shop, and the park on the number line.

2. Write a mathematical statement using absolute value that could be used to find the distance from the coffee shop to the park.

$$|-3| + |5|$$

3. How many blocks is it from the coffee shop to the park?

$$|-3| + |5|$$
$$3 + 5 = 8 \text{ blocks}$$

4. Write a mathematical statement using absolute value that could be used to determine how much farther from Amber's house the coffee shop is than the park.

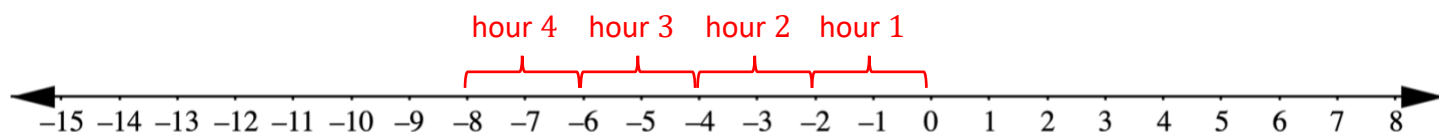

$$|5| - |-3|$$

5. How much farther from Amber's house is the coffee shop than the park?

$$|5| - |-3|$$
$$5 - 3 = 2 \text{ blocks}$$

For the 4 hours between 5pm and 9pm, the temperature change was -2 per hour.

6. Model the change in temperature on the number line.

7. Write a mathematical statement using absolute value that could be used to determine the total decrease in temperature from 5pm to 9pm.

$$4 \times |-2|$$

8. What is the total decrease in temperature from 5pm to 9pm?

$$4 \times |-2|$$

$$4 \times 2$$

$$= 8^\circ \text{ decrease in temperature}$$

Last week, Neville made 2 transactions on his bank account. He deposited \$209 on Monday and withdrew \$188 on Thursday.

9. Write a mathematical statement using absolute value that could be used to determine the total change to Neville's bank account last week.

$$|209| - |-188|$$

10. What was the total change to Neville's bank account last week?

$$|209| - |-188|$$

$$209 - 188$$

$$= 21$$

Neville had a \$21 gain in his bank account last week.
