

1. A coordinate grid is shown.

Plot and label the given points on the coordinate grid.

	Point	Label
a.	$(8\frac{1}{2}, -6)$	<i>D</i>
b.	$(-3\frac{1}{2}, 4\frac{1}{2})$	<i>K</i>
c.	$(-12, -4\frac{1}{2})$	<i>M</i>
d.	$(8\frac{1}{2}, 6)$	<i>R</i>
e.	$(3\frac{1}{2}, 4\frac{1}{2})$	<i>W</i>

2. A coordinate grid with several labeled ordered pairs is shown.

- a. Give the label of a coordinate that is on the x -axis.

Label	<i>F or L</i>
--------------	---------------

- b. Give the labels of the coordinates that are reflections of each other across the y -axis.

Labels	<i>N and B L and F</i>
---------------	----------------------------

Give the coordinates of each ordered pair.

	Label	Coordinates
c.	<i>H</i>	<i>(-2.5, 1.75)</i>
d.	<i>P</i>	<i>(-1.25, -0.5)</i>
e.	<i>Z</i>	<i>(2.25, -2.0)</i>

3. Rectangle $HDMW$ is shown on the coordinate grid.

- a. Determine the distance between points H and W .

Distance	5 units
-----------------	---------

- b. Determine the perimeter of rectangle $HDMW$.

Perimeter	24 units
------------------	----------

4. A graphic artist is using a computer program to create a design. The design includes a rectangle. Three of the vertices of the rectangle are $(11, -2)$, $(-3, 8)$, and $(11, 8)$.

- a. What is the other vertex of the rectangle?

Vertex	$(-3, -2)$
---------------	------------

- b. Determine the area of the rectangle.

Area	140 square units
-------------	------------------

5. Hilliard Middle-Senior High School Future Farmers of America club is designing a vegetable garden. The club uses a coordinate grid to lay out the garden and the different types of vegetables. A square area of the garden will be reserved for tomatoes. Each gridline on the grid represents a foot (ft). One of the corners of the space for the tomatoes is shown on the coordinate grid.

Plot the other corners of the space for the tomatoes so that each of the coordinates are in different quadrants and the area of the garden is 64 square feet.
