

Grade 6
Unit 5
Lesson 8 Practice

Name Answer Key
Date _____
Period _____

The landing of three arrows are plotted on a coordinate grid.

1. What is the distance between Arrow 1 and Arrow 2?
 $| -3 | + | 2 | = 5$ units
2. What is the distance between Arrow 1 and Arrow 3?
 $| 2 | + | -2 | = 4$ units
3. What is the coordinate point that where Arrow 4 would need to land to create a rectangle?
 $(2, -2)$
4. If Arrow 4 creates a rectangle, what is the perimeter of that rectangle?
 $2(5) + 2(4) = 18$ units
5. If Arrow 4 creates a rectangle, what is the area of that rectangle?
 $(5)(4) = 20$ units²

A tennis court is represented on a coordinate plane where the x -axis represents length, in feet, and the y -axis represents width, in feet.

6. What is the length of the tennis court, in feet?

$$|-28| + |20| = 48 \text{ feet}$$

7. What is the width of the tennis court, in feet?

$$|-5| + |23| = 28 \text{ feet}$$

8. What is the perimeter, in feet, of the tennis court?

$$2(48) + 2(28) = 152 \text{ feet}$$

9. What is the area, in square feet, of the tennis court?

$$(48)(28) = 1,344 \text{ feet}$$

10. The chair umpire sits half-way along the length of the court. What would be a coordinate point that represents the location of the chair umpire?

$$48 \div 2 = 24$$

Answers may vary, but the x -value should be -4 and the y -value outside of the court.

$$(-4, -5)$$
