

Grade 6
Unit 6
Lesson 3 Practice

Name Answer Key
Date _____
Period _____

Amy and Nickie's families are driving to St. Louis, Missouri, from Orlando, Florida. Amy's family is driving a direct route of 992 miles at 60mph. Nickie and her family are driving through Alabama and will drive 1,084 miles at 70mph.

1. At this rate, how many hours will it take Amy's family to get to St. Louis? (Round your answer to the tenths place.)

$$\frac{992 \text{ mi}}{60 \text{ mph}} = 16.5 \text{ hours}$$

2. How many hours will it take Nickie's family to arrive in St. Louis? (Round your answer to the tenths place.)

$$\frac{1084 \text{ mi}}{70 \text{ mph}} = 15.5 \text{ hours}$$

3. Compare the two rates and complete the sentence.

According to these rates, the first to arrive in St. Louis will be Nickie because her family was traveling at a

- ☒ faster
☐ slower

rate.

Beverly bakes cupcakes for the local bakeries. With her kitchen capacity she can bake 12 dozen cupcakes in 2 hours.

4. At this rate, how many cupcakes does she make in 1 hour?

$$\frac{12}{2} = 6 \text{ in one hour} \quad 6(12) = 72 \text{ cupcakes}$$

5. If she works an 8-hour day, how many cupcakes will she make in one day?

$$72(8) = 576 \text{ cupcakes (one day)}$$

6. How many days will she need to bake to produce 1,728 cupcakes?

$$\frac{1728}{576} = 3 \text{ days}$$

7. Beverly charges the bakeries \$480 for an 8-hour day. What is the unit rate of price per dozen?

$$\frac{576}{12} = 48 \text{ dozen per day}$$

$$\frac{\$480}{48 \text{ dozen}} = \$10 \text{ per dozen}$$

Maggie has been recording the weather for the last month. Her observations are represented in the table.

Weather Observed	Number of Days
Sunny	14
Cloudy	16
Rainy	6
Days in the Month	30

8. For every $\frac{16}{8}$ cloudy days, $\frac{6}{3}$ of them would be rainy.
9. What is the ratio of sunny days to total days of the month?

$$\frac{14}{30} \text{ or } \frac{7}{15}$$

10. Complete the sentence.

The ratio of rainy days to total days in the month is $\frac{6}{30}$.

- ☒ 1:5
☐ 8:15
