

A Frappuccino is a blend of coffee and milk poured over crushed ice. One Frappuccino consist of 8 ounces of very strong coffee and 6 ounces of milk.

Coffee	Milk	Frappuccino
48 oz	36 oz	6
32 oz	24 oz	4
96 oz	72 oz	12

Use the table for questions 1 through 5.

1. Complete the table that represents the mixture of Frappuccino.

2. What is the unit rate of coffee to a frappuccino?

$$\frac{8 \text{ oz}}{1 \text{ frap}}$$

3. The ratio of coffee to milk for 6 orders of Frappuccino is 48 : 36.

4 3

4. The ounces of milk needed for an order of 3 Frappuccinos is $3(6) = 18$

☐ 18
☐ 24

5. A delivery of 480 ounces of milk was just made to the coffee shop. The shop will need to brew ☐ 80 ☒ 640 ounces of coffee to put all the milk towards Frappuccinos.

$$\frac{480 \text{ milk}}{x \text{ coffee}} = \frac{3 \text{ milk}}{4 \text{ coffee}} \quad 640$$

The Shine Central Car Wash has an Ultimate Car Wash that uses 3L of soap and 1.5L of wax for every wash.

3L Soap	1.5L Wax	1 Car Washes
21L	10.5L	7
249L 83(3)	124.5L 1.5	83
36L $\frac{36}{3}$	18L 12(1.5)	12

6. Complete the table that represents the amount of soap and wax used for the Ultimate Car Wash.
7. What is the unit rate of wax to every car wash?
- $\frac{1.5\text{ L}}{1\text{ car}}$ or 1.5:1
8. The ratio of soap to wax for 12 car washes is 36:18.
9. The liters of wax needed for a day of

☐ 53

☐ 26

 Ultimate Car Washes is

☐ 79.5

☐ 159

 .

$53(1.5) = 79.5$
10. A delivery of 1,650 liters of soap was just made to the Shine Central Car Wash. That is enough soap for 550 ultimate car washes. They will need

☐ 825

☐ 750

 liters of wax to match that number of washes.

$\frac{1650\text{ soap}}{3\text{ soap}} = 550$

$550(1.5) = 825$
