

Grade 6
Unit 8
Lesson 2 Practice

Name _____
Date _____
Period _____

Four triangles are shown on the grids. For each triangle, a base and its corresponding height are labeled. The side length of each square is 1 inch (in.). Find the area of each triangle. Show your work and include units.

1.		$\underbrace{7 \cdot 15}_{105} \cdot 0.5 = 52.5$ $105 \cdot 0.5$ Area = $52.5 \text{ or } 52\frac{1}{2} \text{ in}^2$
2.		$\underbrace{8 \cdot 5}_{40} \cdot 0.5 = 20$ $40 \cdot 0.5$ Area = 20 in^2
3.		$\underbrace{12 \cdot 8}_{96} \cdot 0.5 = 48$ $96 \cdot 0.5$ Area = 48 in^2
4.		$\underbrace{9 \cdot 7}_{63} \cdot 0.5 = 31.5$ $63 \cdot 0.5$ Area = $31.5 \text{ or } 31\frac{1}{2} \text{ in}^2$

For each triangle below, circle the base measurement and put a square around the height measurement. Then, use the base and height to find the area of each triangle. Show your work and include units.

5.		$25 \cdot 12 \cdot 0.5$ $300 \cdot 0.5 = 150$ Area = <u>150 cm²</u>
6.		$23.3 \cdot 13.5 \cdot 0.5$ $314.55 \cdot 0.5 = 157.275$ Area = <u>157.275 mm²</u>
7.		$34 \cdot 28.3 \cdot 0.5$ $962.2 \cdot 0.5 = 481.1$ Area = <u>481.1 ft²</u>
8.		$22.5 \cdot 18 \cdot 0.5$ $405 \cdot 0.5 = 202.5$ Area = <u>202.5 m²</u>

Jack found the area of the triangle shown. His work is also shown.

$$\text{Area} = 21 \times 13 \times 0.5$$

$$\text{Area} = 136.5 \text{ ft}^2$$

9. Explain why Jack's answer is incorrect.
 Jack used a side length when he should have multiplied by the height, 8.9 ft.

10. Find the correct area of the triangle.
 $21 \cdot 8.9 \cdot 0.5 = 93.45 \text{ ft}^2$
