

Grade 6
Unit 8
Lesson 4 Practice

Name _____
Date _____
Period _____

A composite figure is shown for questions 1-3. The length of each square is 1 centimeter (cm).

1. Draw lines to decompose the figure into rectangles and/or triangles.

2. Find the area of each rectangle and/or triangle. Include units.

Triangle $\rightarrow 2 \cdot 2 \cdot 0.5 = 2 \text{ cm}^2$

Rectangle $\rightarrow 2 \cdot 5 = 10 \text{ cm}^2$

3. Find the sum of the areas of the rectangles and/or triangles to find the area of the composite figure. Include units.

$2 + 10 = 12 \text{ cm}^2$

A composite figure measured in feet (ft) is shown for questions 4-5.

4. Find the area of the triangle and the rectangle. Include units.

Rectangle: $15.5 \cdot 8 = 124 \text{ ft}^2$

Triangle: $4 \cdot 7.5 \cdot 0.5 = 15 \text{ ft}^2$

5. Find the sum of the areas of the rectangle and triangle to find the area of the composite figure. Include units.

Rectangle: $15.5 \cdot 8 = 124$

Triangle: $4 \cdot 7.5 \cdot 0.5 = 15$

$124 + 15 = 139 \text{ ft}^2$

For each composite figure, find the area in square feet.

6.

Rectangle: $5 \cdot 7 = 35 \text{ ft}^2$
Triangle: $5 \cdot 7 \cdot 0.5 = 17.5 \text{ ft}^2$

Area = 52.5 ft²

7.

Rectangle: $13 \cdot 10.5 = 136.5 \text{ ft}^2$
Triangle: $8 \cdot 29 \cdot 0.5 = 116 \text{ ft}^2$

Area = 252.5 ft²

8.

Rectangle: $18 \cdot 9 = 162 \text{ ft}^2$
Triangle: $18 \cdot 5 \cdot 0.5 = 45 \text{ ft}^2$

Area = 207 ft²

9.

Rectangle 1: $5 \cdot 9 = 45 \text{ ft}^2$
Rectangle 2: $5 \cdot 3 = 15 \text{ ft}^2$
Triangle Left: $5 \cdot 3 \cdot 0.5 = 7.5 \text{ ft}^2$
Triangle Right: $5 \cdot 3 \cdot 0.5 = 7.5 \text{ ft}^2$

Area = 75 ft²

10. The local high school is plotting the space for a pool. A drawing of the pool is shown. What is the area of the pool in square meters?

Rectangle Top: $10 \cdot 6 = 60 \text{ m}^2$
Middle: $5 \cdot 3 = 15 \text{ m}^2$
Bottom: $5 \cdot 7 = 35 \text{ m}^2$
Total Area: 110 m^2
