

Find the missing dimensions of the quadrilaterals and triangle. All measurements are in inches (in.).

		
Area = 4.5 in. ²	Area = 13 in. ²	Area = 25 in. ²
1. $n =$ _____	2. $c =$ _____	3. $g =$ _____

A composite figure is shown measured in feet (ft).

4. Determine the area of the triangle. Include units.

5. If the area of the composite figure is 150 ft², what is the area of the rectangle? Include units.

6. What is the value of the missing dimension, k ? Include units.

7. A university is preparing for the upcoming spring sports season by preparing their grounds. The field is shown. The field has an area of 1,190 square yards (yd^2). Determine the missing dimension, x . Include units.

8. A composite figure with an area of 108 square inches (in^2) is shown. Determine the missing dimension, g . Include units.

9. A composite figure with an area of 76 square centimeters (cm^2). Determine the missing dimension, a . Include units.

10. Jackson is planning the foundation for a new office building. The foundation has an area of 51 square meters (m^2). Determine the missing dimension, b . Include units.
