

Grade 6
Unit 8
Lesson 11 Practice

Name _____
Date _____
Period _____

In the area that is now known as the Sudan, there is a collection of pyramids known as the Nubian Pyramids. The largest pyramid has a square base of 22 feet (ft) and stands 30 ft high. The slant height is 31.95 ft. The net of the pyramid is shown.

1. Label the dimensions of the net. Include units.
2. Complete the table to determine the area of each face of the pyramid.

Side	Formula	Area
Rectangular Base	$A = l \cdot w$	$A = \underline{\hspace{2cm}}$
Triangular Face	$A = \frac{1}{2} \cdot b \cdot h$	$A = \underline{\hspace{2cm}}$
Triangular Face	$A = \frac{1}{2} \cdot b \cdot h$	$A = \underline{\hspace{2cm}}$
Triangular Face	$A = \frac{1}{2} \cdot b \cdot h$	$A = \underline{\hspace{2cm}}$
Triangular Face	$A = \frac{1}{2} \cdot b \cdot h$	$A = \underline{\hspace{2cm}}$

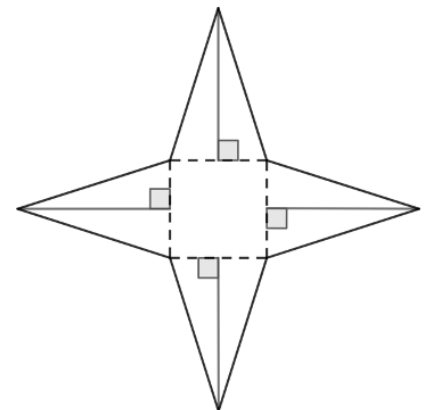

3. Determine the surface area of the pyramid. Include units.

Walt is doing a presentation on the Nubian Pyramids and wants to create a model. The base is square with a side length of 8.5 inches (in.) and stands 11.59 in. high. The slant height of each triangular face is 12.34 in. The net of Walt's model is shown.

4. Label the net with the dimensions of each face. Include units.
5. Complete the table with the area of each face.

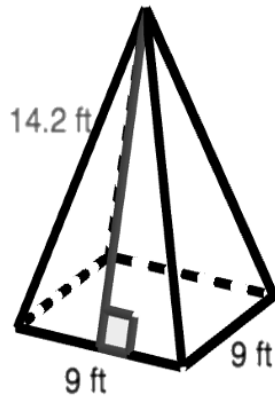

Side	Area (in ²)
Rectangular Base	
Triangular Face	
Triangular Face	
Triangular Face	
Triangular Face	

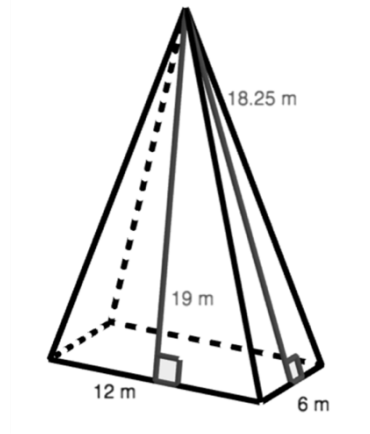

6. What is the surface area of Walt's model? Include units.

For questions 7-8, find the surface area each pyramid. Include units.

7.

8.

9. Calculate the surface area of a rectangular pyramid that has a square base with a side length of 11.5 inches (in.), which is the base of the triangle with a slant height of 15.13 in.
10. Calculate the surface area of a rectangular pyramid that has a rectangular base with a side length of 4 feet (ft), which is the base of a triangle with a slant height of 3.9 ft, and a side length of 5 ft, which is the base of a triangle with a slant height of 4.1 ft.
