

For questions 1-7, determine whether each question is statistical or not statistical.

1. What Ocean does Florida border?

Not statistical

2. What size jerseys will each team at the school need?

Statistical

3. How many pets do you have?

Statistical

4. Is Orlando the capital of Florida?

Not statistical

5. How many followers do your classmates have on Twitter?

Statistical

6. What is each member of your class's favorite movie?

Statistical

(answers may vary)

7. The question "Who was the first President of the United States?" is not statistical. Use the definition to justify why it is not a statistical question.

The question cannot be answered by collecting data. Additionally, there is no variability in the data.

8. Decide if the question, "How many houses are in your neighborhood?" is statistical or non-statistical. Explain your decision.

Statistical. We could answer the question by collecting data and there would be variability in the data.

9. Create an example of a statistical question.

How many siblings do you have?

10. Create a counterexample that is NOT a statistical question.

What time does practice start?
