

Mr. Gonzalez is tracking the number of hours he sleeps each night. His data for the last 2 weeks is shown.

6.5	8	5.5	7.5	9	10	6	7	5.5	8	6.5	10	4	8.5
-----	---	-----	-----	---	----	---	---	-----	---	-----	----	---	-----

1. Create a frequency chart of the data. 2. Create a histogram of the data.

Hours of Sleep	Frequency
4 – 5.5	1
5.5 – 7	5
7 – 8.5	4
8.5 – 10	2
10 – 11.5	2

Sole asked her classmates how many pairs of shoes they have. Her data are shown.

1, 1, 1 2, 2, 2, 2, 3, 3, 3, 3, 3, 4, 5, 5, 5, 6, 8, 9, 10, 13, 15

3. Create a frequency chart of the data. 4. Create a histogram of the data.

Pairs of Shoes	Frequency
0 – 2	3
2 – 4	9
4 – 6	4
6 – 8	1
8 – 10	2
10 – 12	1
12 – 14	1
14 – 16	1

5. Explain how you determined the scale for the axes on your histogram in question 4. **Answers may vary.** I used the interval width, 2, to number the x-axis: $16 \div 8 = 2$. Because the frequency does not exceed 10, I numbered the y-axis by 1

The weights, in pounds (lb), of 12 Dachshund puppies are shown.

2.8	3.6	3.1	5.2	4.8	3.9	4	4.3	5	3.5	2.9	4
-----	-----	-----	-----	-----	-----	---	-----	---	-----	-----	---

6. Create a frequency chart of the data. 7. Create a histogram of the data.

Weight (lb)	Frequency
2.5 – 3	2
3 – 3.5	1
3.5 – 4	3
4 – 4.5	3
4.5 – 5	1
5 – 5.5	2

The weights, in pounds (lb), of 12 adult Dachshunds are shown.

25	18	32	16	27	30	26	19	29	20	22	24
----	----	----	----	----	----	----	----	----	----	----	----

8. Create a frequency chart of the data. 9. Create a histogram of the data.

Weight (lb)	Frequency
16 – 20	3
20 – 24	2
24 – 28	4
28 – 32	2
32 – 36	1

10. How are your histograms for questions 7 and 9 different?
 Answers may vary. I used the interval width, 4, to number the x -axis so that the bars are wide and can show the pattern of the data. Since the frequency does not exceed 5, I numbered the y -axis by 1.
