

Unit 10, Lesson 4: Presenting Data

Benchmarks

MA.6.DP.1.1 Recognize and formulate a statistical question that would generate numerical data.

MA.6.DP.1.3 Given a box plot within a real-world context, determine the minimum, the lower quartile, the median, the upper quartile, and the maximum. Use this summary of the data to describe the spread and distribution of the data.

MA.6.DP.1.4 Given a histogram or line plot within a real-world context, qualitatively describe and interpret the spread and distribution of the data, including any symmetry, skewness, gaps, clusters, outliers, and the range.

MA.6.DP.1.5 Create box plots and histograms to represent sets of numerical data within real-world contexts.

Learning Target

- ☐ I can explain data using multiple representations.

10.4.1 Warm-Up: Presentation Preparation

1. Meet with your group from the prior lesson to finalize your data displays for the group presentations.

10.4.2 Activity: Presenting Data

Assign a group member to ask each question below for the presentation.

1. What conclusion did you reach about the class?
2. Do the displays clearly demonstrate this conclusion?
3. Are there any unusual features in the data?
4. Is there anything else that the group noticed from the data displays?
5. Explain which type of graph, box plot or histogram, was more useful to display the data from your group survey.
6. Explain if the data collected is truthful. If the data was not truthful, explain what could have been done to ensure the data collected from the survey was truthful.
7. Is there anything else that the group wonders about the results?

1. What is an advantage of using graphs to present findings?
2. Are there disadvantages of using graphs to present findings? Explain.
3. What new information did you learn about the class today from the different survey results?
