

A jewelry store owner tracked the number of pieces she sold for 22 days. Her data are shown.

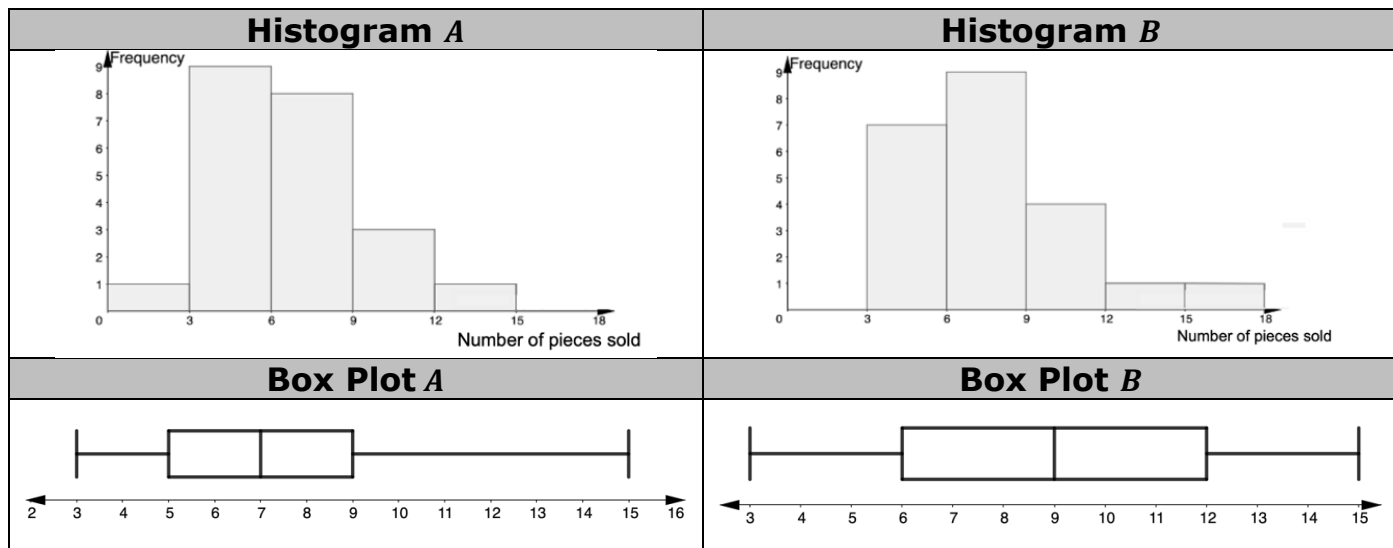

8	3	9	5	6	4	9	15	5	7	7
4	5	8	12	8	6	6	5	10	8	11

1. Create a frequency table of the data.

Number of pieces sold	Frequency

2. Determine the five-number summary of the data set.

Two histograms and two box plots are shown.

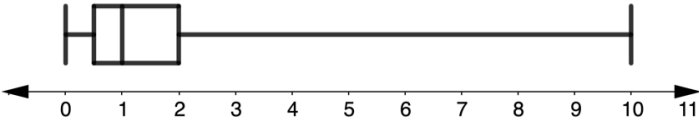

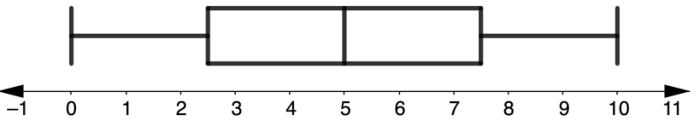

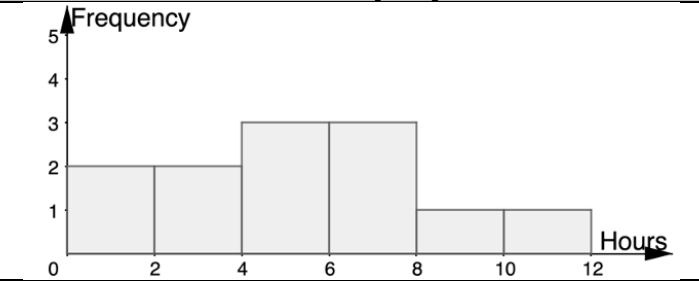

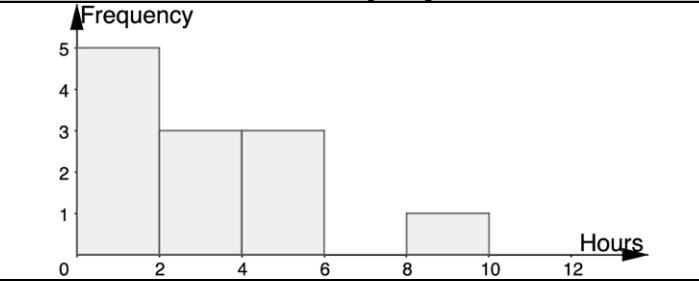

3. Explain which histogram better represents the data.

4. Explain which box plot better represents the data.

5. Which graph, box plot or histogram, is better for displaying this data? Explain your reasoning.

Four data displays and four data sets are shown.

Data Display 1	Data Display 2
	
Data Display 3	Data Display 4
	
Data Set A	Data Set B
0, 0, 2, 3, 4, 4, 4, 6, 6, 7, 8, 10	0, 1, 2, 3, 4, 5, 5, 6, 7, 8, 9, 10
Data Set C	Data Set D
0, 0, 1, 1, 1, 2, 2, 3, 4, 5, 5, 9	0, 0, 0, 1, 1, 1, 1, 1, 2, 2, 5, 10

Match each Data Display to a Data Set.

6. Display 1: ____ 7. Display 2: ____

8. Display 3: ____ 9. Display 4: ____

10. Explain how you matched the data set that was represented by Data Display.
