

Grade 6
Unit 12
Lesson 1 Practice

Name Answer Key
Date _____
Period _____

Solve.

$$\begin{array}{r} 1. \quad b + 4.25 = 11.4 \\ \quad \underline{-4.25} \quad \underline{-4.25} \\ \quad \quad b = 7.15 \end{array}$$

$$\begin{array}{r} 2. \quad 3 \cdot \frac{k}{3} = 10.2 \quad \cdot 3 \\ \quad \quad \quad k = 30.6 \end{array}$$

$$\begin{array}{r} 3. \quad 1.5 - g = 0.29 \\ \quad \quad +g \quad +g \\ \quad 1.5 = g + 0.29 \\ \quad \underline{-0.29} \quad \underline{-0.29} \\ \quad \quad 1.21 = g \end{array}$$

$$\begin{array}{r} 4. \quad \frac{12.5}{0.25} = \frac{0.25t}{0.25} \\ \quad \quad \quad t = 50 \end{array}$$

$$\begin{array}{r} 5. \quad 6.4 - f = 17.2 \\ \quad \quad +f \quad +f \\ \quad 6.4 = f + 17.2 \\ \quad \underline{-17.2} \quad \underline{-17.2} \\ \quad \quad -10.8 = f \end{array}$$

$$\begin{array}{r} 6. \quad 6 \cdot \frac{1}{6}r = 36.6 \quad \cdot 6 \\ \quad \quad \quad r = 219.6 \end{array}$$

7. Iranetta had 1.8 liters of lime juice available for her punch. She poured some into her punch bowl and had 0.6 liters remaining. How many liters of water did she pour into the punch bowl?

$$\begin{array}{r} 1.8 - x = 0.6 \\ \quad \quad +x \quad +x \\ \quad 1.8 = x + 0.6 \\ \quad \underline{-0.6} \quad \underline{-0.6} \\ \quad \quad 1.2 = x \end{array}$$

Iranetta poured 1.2 liters into the punch bowl.

8. Peter bought a new premium bike helmet for \$81.77 from Store A, which was \$9.24 cheaper than the same helmet on sale at Store B. What was the price of the helmet at Store B?

$$\begin{array}{r} B - 9.24 = 81.77 \\ \quad \quad +9.24 \quad +9.24 \\ \quad \quad \quad B = 91.01 \end{array}$$

The price of the helmet at Store B was \$91.01.

9. A t-shirt company offers a coupon for 20% off the price of its new shirts. If the new price of a shirt, after the coupon is applied, is \$12.72, what was the original price of a t-shirt?

$$\begin{aligned} 0.8p &= \underline{12.72} \\ 0.8 & \quad 0.8 \\ p &= 15.9 \end{aligned}$$

The original price of the t-shirt is \$15.90.

10. Three students lay end-to-end on the ground to illustrate a straight angle as part of their group project. If each student is 4.7 feet tall, how long of a line do they make when on the ground?

$$3 \cdot \frac{h}{3} = 4.7 \cdot 3$$

The line they make is 14.1 feet long.

$$h = 14.1$$
