

Grade 6
Unit 12
Lesson 5 Practice

Name Answer Key
Date _____
Period _____

Write an algebraic expression to represent each real-world situation.

1. Julia has 11 videogames downloaded to her device. She deleted x of those games from the device. How many videogames are left on her device?

$$11 - x$$

2. Tony has x tickets from a local arcade. His brother has 10 times more tickets than Tony. How many tickets does his brother have?

$$10x \text{ or } 10 \cdot x$$

3. Susan sold 42 candy bars for a fundraiser. Her friend sold x more candy bars than her. How many candy bars did the friend sell?

$$42 + x \text{ or } x + 42$$

4. A grocery store has received a shipment of 60 new boxes of cereal to be placed equally on x , shelves. How many boxes will be on each shelf?

$$60 \div x \text{ or } \frac{60}{x}$$

5. Harold has a plant that measured h inches tall last week. This week, the plant is 19 inches tall.

$$19 - h$$

For each expression, create a real-world scenario that the algebraic expression could represent. **Answer may vary.**

6. $x + 7$

Andrea earned \$7 more than her younger brother earned, x .

7. $\frac{22}{x}$

A bag of 22 pieces of candy is split evenly among x friends.

8. $71y$

71 grams of dry food are given to each of the small dogs, y , at the shelter.

9. $k - 81$

Cherie's weekly budget, k , is decreased by \$81 after grocery shopping.

10. $12 + h$

Jack has h homework problems to complete. His friend from another class has 12 more problems than Jack has to do.
