

6Ath Grade: Unit 10, Lesson 2

1. A data set is shown. What will happen to the range if the 45 is removed?

$\{65, 55, 120, 75, 60, 55, 45\}$

2. Describe the process for finding the range.

3. A data set is shown. What will happen to the mean if the 25 is removed?

$\{72, 75, 77, 73, 60, 25\}$

4. What term is used to describe the number that occurs most frequently in a data set?
5. Describe the process for finding the median with an even set of data points?
6. A data set is shown. Find the median of the data set.

$\{88, 79, 99, 96, 91\}$

7. A data set consists of the following: 123, 111, 134, 121, 147. Give an example of a possible outlier, if added to the data set.

8. A data set is shown. Given the following calculation, what measure of center or measure of variation is being used?

15	18	19	23	11	27	21	20	17
----	----	----	----	----	----	----	----	----

$$Q3 - Q1 = 22 - 16 = 6$$

9. What is the interquartile range a measure of?
