

Grade 6 Accelerated
Unit 10
Lesson 3 Practice

Name _____
Date _____
Period _____

The histogram shows the daily number of coffees sold in a cafe.

- Describe the shape of the histogram.
- Explain which measure of center, mean or median, best represents this data.
- Explain which measure of variability, range or IQR, best represents this data.

Mrs. Nelson randomly picked some of her students to ask how many minutes a day they spend talking on their phones. The data set is shown below.

134	246	79	115	203
47	98	50	0	111

Match the measures of spread and variation with their calculations for the data set in questions 4-7.

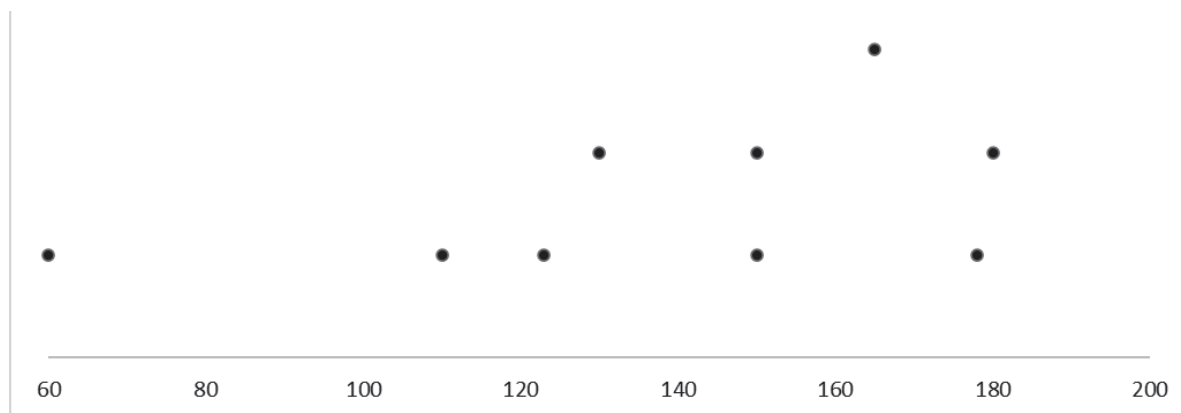

A. Median	B. Mean	C. IQR	D. Range
-----------	---------	--------	----------

4.	$246 - 0 = 246$
5.	$\frac{98 + 111}{2}$
6.	$134 - 50 = 84$
7.	$\frac{134 + 246 + 79 + 115 + 203 + 47 + 98 + 50 + 0 + 111}{10}$

Explain which measure of variability, range or IQR, best represents this data. Jasmine wanted to know how long her classmates had traveled to go on vacation during spring break. Below is a list of their travel times and a dot plot displaying the data for questions 8-10.

60, 110, 123, 130, 150, 150, 165, 178, 180

8. What is the range of the data set?
9. What is the IQR of the data set?
10. Is there an outlier in the data set? If the outlier was removed, how would it effect the mean of the data?
