

Grade 6 Accelerated
Unit 10
Lesson 3 Homework

Name Key
Date _____
Period _____

1. Fill in the blanks with the terms provided.

mean	range	median	interquartile range (IQR)
------	-------	--------	---------------------------

The Median is the middle of an ordered list of values. It is a measure of center, or central tendency.

The mean is the arithmetic average of a set of numbers. It is a measure of center, or a central tendency.

The range is the difference between the highest data value and the lowest data value in a data set. It is a measure of variation.

A measure of variation in a set of numerical data, the IQR is the distance between the first and third quartiles of the data set.

The data for the number of emails a teacher gets on school days, Monday-Friday, was recorded for two weeks. Use the data shown for questions 2-8.

59	11	65	53	70
60	57	74	67	56

2. Determine the mean of the data set.

$$\frac{572}{10} = 57.2$$

3. Determine the median of the data set.

$$\frac{59+60}{2} = 59.5$$

4. What is the range of the data set?

$$74 - 11 = 63$$

5. Which measures of center can be determined from a histogram?

No measures of center.

6. The presence of an outlier does not have a significant effect on the IQR. True or False?

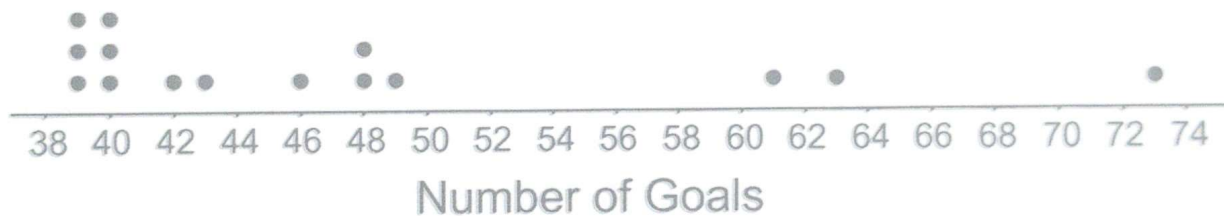

true

7. The presence of an outlier does have significant effect on the range. True or False

true

Below is a line plot of the number of goals scored by the top 15 women goal scorers during the 2019-2020 NCAA Women's Division 1 soccer season.

2019-2020 NCAA Women's
Division 1 Soccer Top Scorers

8. Which measure of the center, the mean or median, would be used summarize this data?

Median

9. Explain whether the range or the interquartile range should be used to summarize the spread of the data

IQR

10. What is the range of the data?

$$73 - 39 = 34$$
