

6Ath Grade: Unit 10, Lesson 4

1. A set of values are shown, with a mean of 62.3 and a median of 62. What measure would be better to use in this case to determine the average of the data, since there is not an outlier?

52	56	56	58	60	61	63	63	67	68	70	74
----	----	----	----	----	----	----	----	----	----	----	----

2. What is the IQR of the following data set?

6.5	7	7.5	8	9	10	10.5
-----	---	-----	---	---	----	------

3. What value describes how much the first and last value vary?
