

Grade 6 Accelerated
Unit 10
Lesson 5 Homework

Name _____
Date _____
Period _____

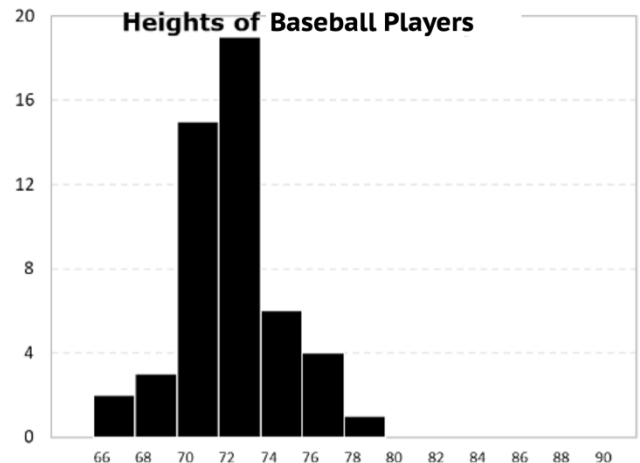

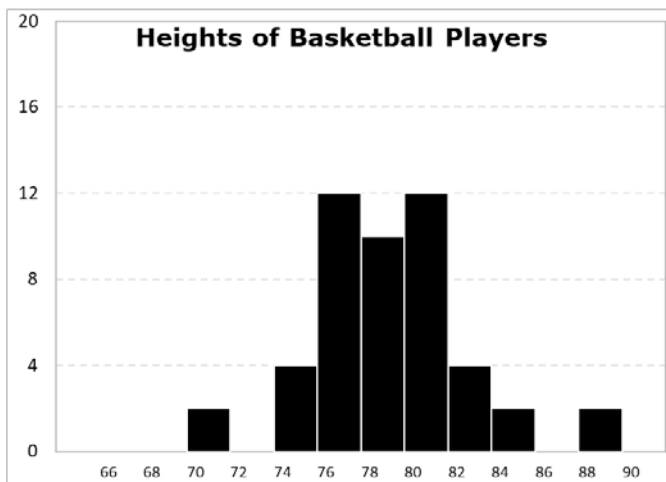

The line plots below show the number of hours the students in three different classes spend watching videos on the internet each week.

Time (in hours)

1. Which line plot shown has a center of data that is greater than the center of data for Mr. Kirk's class?
2. The value of the largest mean number of hours of all three classes is _____.
3. The value of the largest median number of hours of all three classes is _____.
4. Which of the line plots shown has the most variability in the times spent watching videos on the internet?
5. Based on the data from the line plots shown, which class spends the most time watching videos on the internet each week?

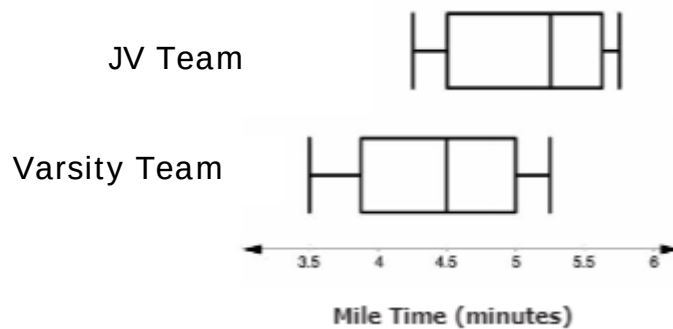

The two histograms show height distributions of 50 male professional basketball players and 50 male professional baseball players, in inches (in).

Height (in.)

6. The value of the larger mean height for the two groups is _____.
7. The value of the larger median height for the two groups is _____.
8. In one to two sentences use the words shape, center, and variability to describe the differences between the two histograms.

The box plots shown below are the mile times for a JV and Varsity volleyball team.

9. Calculate and describe how the centers compare between the two teams.
10. Which team has the bigger variability? Explain your reasoning.
