

Grade 6 Accelerated
Unit 12
Lesson 6 Homework

Name Answer Key
Date _____
Period _____

For each problem, round your answer to the nearest hundredth, if necessary.

1. Randall bought a table priced at \$40 but is on sale for 30% off. After paying a tax of 3%, how much did Randall pay?

$$40(0.7) = 28 \quad 28(1.03) \approx \$28.84$$

Randall paid \$28.84 total for the table.

2. Amy bought a surfboard for \$175.82. Amy restored the surfboard and placed a mark up of 30% to sell in her store. A customer purchased the surfboard and paid an additional 2% in taxes. What was the total price of the surfboard?

$$175.82(1.3) = 228.566 \quad 228.566(1.02) \approx \$233.14$$

The total price of the surfboard was \$233.14.

3. A jewelry store bought a ring and mark it up 115% from the original cost of \$85.90. A customer purchased the ring and paid 8% sales tax. How much, including tax, did the customer pay for the ring?

$$85.90(2.15) = 184.685 \quad 184.685(1.08) \approx \$199.4598$$

The customer paid \$199.46 for the ring.

4. Jessica owns a furniture store with refurbished dining room tables. She purchased a table for \$275. After repairs, Jessica put the table up for sale and marked it up 100% from her original cost. After a while, the table was sold. Determine the total cost of the table including an added 11% sales tax.

$$275(2) = 550 \quad 550(1.11) \approx \$610.50$$

The total cost of the table was \$610.50.

5. Harold bought a washing machine that was marked down 60% of its original price of \$380. If the store also charged Harold 5% in taxes, how much did Harold have to pay at the cash register?

$$380(0.40) = 152 \quad 152(1.05) \approx \$159.60$$

Harold had to pay \$159.60.

6. Jimmy paid a total of \$870 for an item that had a discount of 15%. He also paid 3% in taxes after the discount was applied. Calculate how much the item cost before the discount.

$$\frac{1.03x}{1.03} = \frac{870}{1.03} \quad x = 844.66 \quad \frac{.85x}{.85} = \frac{844.66}{.85} \quad x = 993.72$$

The original price of the item was \$993.72.

7. A used car was sold for \$3,500 after taxes. The car had a markup of 110% and its new owner had to pay 8% in taxes. How much was the original price of the car?

$$\frac{3500}{1.08} = 3240.74 \quad \frac{3240.74}{2.1} = \$1543.21$$

The original price of the car was \$1543.21.

8. Rachel enters a store that was selling everything at 15% off. Rachel's total bill, before the discount, was \$137. Rachel had to pay a 2% sales tax with her purchase. How much did Rachel pay?

$$137(0.85) = 116.45 \quad 116.45(1.02) = \$118.78$$

Rachel paid \$118.78.

9. An item was sold at \$1,875 after taxes. The item had a discount of 20% and a sales tax of 10%. How much was the original price of the item?

$$\frac{1875}{1.1} = 1704.55 \quad \frac{1704.55}{0.8} = \$2130.69$$

The original price was \$2130.69.

10. Joshua owns a firewood company. Joshua bought a load of wood for \$1,780 and marked up the wood by 20%. Joshua sells the wood and charges a 3% sales tax. For how much does Joshua sell the wood?

$$1780(1.2) = 2136(1.03) = \$2200.08$$

He sells the wood for \$2200.08.
