

2.5.4 Wrap-Up: Ticket Out the Door

Mishka is planning to host a music festival to raise funds for a local food bank. Her budget is shown.

Item	Amount
Ticket price at the door	\$9.00
Fee paid to each band	\$175.00
Early-bird ticket price	\$6.50
Equipment rental	\$225.00
Publicity (flyers/artwork)	\$64.57
Stage rental	\$187.50

1. In order to find the **gross income** for the music festival, I need to know _____ and _____.
2. List the items in Mishka's budget that are **expenses**.
3. If Mishka had a gross income of \$1,166.50 and expenses totaling \$827.07, what is her net income for the music festival?

Unit 2, Lesson 6: Solving Two-Step, Real-World Problems With Fractions or Decimals

Benchmark

MA.6.NSO.2.3 Solve multi-step, real-world problems involving any of the four operations with positive multi-digit decimals or positive fractions, including mixed numbers.

Learning Target

- ☐ I can solve real-world problems with two steps using decimals or fractions.

2.6.1 Warm-Up: Would You Rather?

Would you rather buy 8 Skittles for 25 cents or 62 Skittles for \$1.49?

1. Explain your choice.
2. Would your answer change if you could choose what flavor the 8 Skittles were but you could not choose the flavors from the bag?

2.6.2 Guided Practice: Two-Step Rational Problems

1. Sophie grew her hair out for a long period of time. Her hair is $2\frac{3}{5}$ feet long. She donated her hair by cutting $\frac{5}{6}$ of a foot off. Sophie's hair then grew $1\frac{2}{3}$ feet.
 - a. What operations are needed to determine the length of Sophie's hair?
 - b. What values are necessary to determine the length of Sophie's hair?
 - c. Write the numeric expression that can be used to determine the length of Sophie's hair.
 - d. Determine the length of Sophie's hair.
 - e. Determine if the length of Sophie's hair makes sense. Support your answer.

2. Tiffany has a balance of \$167.32 in her checking account. She deposits \$58.16 in her checking account and then writes a check for \$97.27.
- What operations are needed to determine the amount of money in Tiffany's bank account?
 - What values are necessary to determine the amount of money in Tiffany's bank account?
 - Write the numeric expression that can be used to determine the amount of money in Tiffany's bank account.
 - Determine the amount of money Tiffany has left in her checking account.

2.6.3 Collaboration: Error Analysis

- Stefanie solved the following word problem. Her work is shown.
 - Evaluate her work and determine where she made mistakes.

Problem	Stefanie's Work
Janelle has $2\frac{1}{4}$ pans of brownies. Each pan made 8 brownies. She gave $\frac{2}{3}$ of the brownies to her friends. How many brownies did Janelle give away?	Step 1: $2\frac{1}{4} \times 8 = \frac{9}{4} \times 8 = \frac{18}{4}$ Step 2: $\frac{18}{4} \div \frac{2}{3} = \frac{18}{4} \times \frac{3}{2} = 6\frac{3}{4}$ Answer: She gave away $6\frac{3}{4}$ brownies.

- Help Stefanie understand and learn from her mistakes. Write a brief note to Stefanie explaining what her mistakes were and how she could learn from those mistakes.

- Read your partner's note to Stefanie and offer suggestions for how to improve their note.

2.6.4 Your Turn!

1. Martha fills her ice cream bowl with $\frac{3}{4}$ cup of ice cream, $\frac{1}{8}$ cup of candy toppings, and the rest with fruit toppings. If the bowl contains a total of $1\frac{1}{2}$ cups, how much of the bowl is made up of fruit toppings?
2. Jasmine has a ribbon that is 12.6 meters long. Sharon has a ribbon that is 3.8 meters shorter. What is the total length of the two ribbons?
3. Before soccer practice, Hernando puts $4\frac{1}{8}$ cups of sports drink in a water bottle with $1\frac{2}{3}$ cups of ice. After a hot afternoon of practice, he drinks $2\frac{1}{5}$ cups of the sports drink and melted ice. How many cups of this mixture are left in the water bottle?
4. A bag of chocolates weighs 1.384 pounds. If Luis gives each of his 6 friends 0.23 pounds of chocolate, how many pounds of chocolate does Luis have left?

2.6.5 Wrap-Up: Reflection

Place an **X** on the line to indicate your understanding of each of today's learning targets. Then, provide a brief explanation or evidence to support your self-assessment.

1. I can solve real-world problems with two steps using decimals.

I need help.
I can't get started.

I'm getting there.

I understand
and have evidence.

2. I can solve real-world problems with two steps using fractions.

I need help.
I can't get started.

I'm getting there.

I understand
and have evidence.

Unit 2, Lesson 7: Solving Multi-Step, Real-World Problems With Fractions or Decimals

Benchmark

MA.6.NSO.2.3 Solve multi-step, real-world problems involving any of the four operations with positive multi-digit decimals or positive fractions, including mixed numbers.

Learning Target

- ☐ I can solve real-world problems with three steps using decimals or fractions.
