Unit 2
Lesson 7 Practice

Name Answer Key
Date _____
Period _____

1. Sara bought 8.6 yards of fabric that cost \$12.40 per yard. If she had a coupon for \$10 off, how much did Sara spend on the fabric altogether?

$$8.6 \times 12.40 = 106.64$$

$$106.64 - 10 = \$96.64$$

Francis is buying wallpaper for 2 walls in his bedroom. The first wall measures 9.2 feet by 7.5 feet, and the second wall measures 9.2 feet by 8.8 feet. Both walls are rectangular. Wallpaper costs \$7.40 per square foot, and a bucket of primer costs \$28.99.

2. How many square feet of wallpaper does Francis need altogether?

$$9.2 \times 7.5 + 9.2 \times 8.8 = 69 + 80.96 = 149.96 \text{ sq ft}$$

3. How much will Francis spend on wallpaper and one bucket of primer?

$$7.40(149.96)$$

$$1109.70 + 28.99 = \$1138.69$$

Angelica's goal is to run $3\frac{1}{4}$ miles on Monday, $2\frac{5}{12}$ miles on Tuesday, and $3\frac{5}{6}$ miles on Wednesday. She runs on a track where each lap is $\frac{1}{3}$ of a mile.

4. How many total laps will Angelica have to run to meet her goal for Monday thru Wednesday?

$$\left(3\frac{1}{4} + 2\frac{5}{12} + 3\frac{5}{6}\right) \div \frac{1}{3}$$

$$\left(9\frac{1}{2}\right) \div \frac{1}{3}$$

$$\frac{19}{2} \cdot \frac{3}{1} = \boxed{\frac{57}{2} \text{ or } 28\frac{1}{2} \text{ laps}}$$

5. Suppose last week Angelica ran a total of 40 laps. How many more miles will she have to run after Wednesday to run the same distance this week as last week?

$$40 - 28\frac{1}{2} = 11\frac{1}{2} \text{ laps} \left(\frac{1}{3}\right)$$

$$\frac{23}{2} \cdot \frac{1}{3} = \frac{23}{6} = \boxed{3\frac{5}{6} \text{ miles}}$$

Gustav is saving his money to buy a new computer. He currently has \$318.73 in his savings account. The table shows the occasional jobs Gustav works to earn money.

Job	Rate
Lawn-mowing	\$12.50 per lawn
Car-washing	\$13.25 per car
Babysitting	\$16 per hour
DJing	\$21 per hour

6. On Saturday, Gustav mowed 3 lawns and washed 7 cars. How much money did he make altogether on Saturday?

$$(3 \times 12.50 + 7 \times 13.25) \rightarrow 37.50 + 92.75 = \$130.25$$

7. On Sunday, Gustav babysat his cousin for 3.5 hours. Then, he DJed a party that was 2.5 hours long. How much money did Gustav make on Sunday?

$$(3.5 \times 16 + 2.5 \times 21) \rightarrow 56 + 52.50 = \$108.50$$

8. If he deposits all his income from the weekend into his savings account, how much will Gustav now have in his savings account?

$$318.73 + 130.25 + 108.50 = \$557.48$$

9. Suppose the computer Gustav wants to buy costs \$999. How much more does he need to save?

$$999.00 - 557.48 = \$441.52$$

10. What is a combination of jobs that Gustav could work such that he would have enough money saved to buy his computer?

Answers will vary.
