Unit 3  
Lesson 8 Practice

Name \_\_\_\_\_  
Date \_\_\_\_\_  
Period \_\_\_\_\_

Use a calculator to complete the table. Find the value of each mathematical statement. Then, if possible, rewrite the value as a power of 10.

| Mathematical Statement    | Value Found Using the Calculator | Value Written as a Power of 10 |
|---------------------------|----------------------------------|--------------------------------|
| 1. $\frac{10^5}{10^{12}}$ |                                  |                                |
| 2. $10^6 + 10^4$          |                                  |                                |
| 3. $10^7 \times 10^2$     |                                  |                                |

4. Which of the mathematical statements could be rewritten using a power of 10? Explain your reasoning.

5. Which of the mathematical statements could not be rewritten using a power of 10? Explain your reasoning.

6. Complete the table.

| Scientific Notation | Standard Form |
|---------------------|---------------|
| $4.1 \times 10^5$   |               |
|                     | 8,200,000     |
| $1.64 \times 10^7$  |               |

7. How many times larger is 8.2 than 4.1?

8. How many times larger is  $10^7$  than  $10^5$ ?

9. How many times larger is  $8.2 \times 10^7$  than  $4.1 \times 10^5$ ?

10. The population of visitors going to Disney World was about  $6.94 \times 10^6$  in 2020. The population of visitors going to Universal Studios in 2020 was about  $1.7 \times 10^6$ .

Complete the statement.

In 2020, the population of visitors to Disney World was about \_\_\_\_\_ times larger than the population of visitors going to Universal Studios.
