

Grade 7 Accelerated
Unit 1
Lesson 8 Homework

Name _____
Date _____
Period _____

Use the table of possible solutions for questions 1-2.

Possible Solutions				
-10.5	0	$6\frac{3}{8}$	-4.999	-20.6
42	-5	12.75	$-1\frac{6}{17}$	-7.25

Determine the values from the table that are solutions to the inequalities.

- $-25 < 4x - 5$
- $-25 > 4x - 5$
- Rewrite $-25 < 4x - 5$ and $-25 > 4x - 5$ so that -5 is a solution. Explain your reasoning.
- Inequalities have _____ solutions that are represented on the number line.
- Talia and Jen were solving the inequality $8 - 1.2c \geq 5.6$
Talia said the solution is $c \leq -2$, while Jen said the solutions is $c \geq -2$. Who do you agree with? Justify your reasoning mathematically.
- When multiplying or dividing by negative coefficient in an inequality, the resulting inequality symbol _____.

For questions 7-10, solve each inequality and graph the solution set.

7. $5 + \frac{2}{3}b \geq 9$

8. $4.6c - 9.5 < 4.3$

9. $-1 \leq -4 - \frac{y}{6}$

10. $-7x - 12 > 16$
