

Grade 7 Accelerated
Unit 2
Lesson 1 Homework

Name _____
Date _____
Period _____

1. Identify the first 10 perfect squares.
2. What does it mean for a number to be a perfect square? Provide an example.

Square A is smaller than Square B . Square B is smaller than Square C .

The three squares' side lengths are 3, 4.2, and $5\frac{1}{2}$. Complete the equation for each of the squares shown.

3. Square A Area = (_____)² or Area = _____ × _____ = _____
4. Square B Area = (_____)² or Area = _____ × _____ = _____
5. Square C Area = (_____)² or Area = _____ × _____ = _____

Find the length of a side of a square for each area given.

6. 81 square inches

7. $\frac{4}{25} \text{ cm}^2$

8. 0.49 square units

The graph represents the equation $y = x^2$.

9. Complete the table of values to find corresponding y -values. Then plot the point on the graph.

x	Substitute into $y = x^2$	Coordinates (x, y)
-1.4		
-1		
0		
$\frac{2}{5}$		
2		

10. Why is the graph of $y = x^2$ above the x -axis?
