

Grade 7 Accelerated
Unit 2
Lesson 6 Homework

Name _____
Date _____
Period _____

1. Identify an irrational number between 7 and 8.

2. Ricky thinks that $\sqrt[3]{65}$ is greater than $\frac{17}{4}$. Sunny thinks that $\frac{17}{4}$ is greater. Who is correct? Explain.

Compare each pair of expressions using $<$, $>$, or $=$.

3. $\frac{319}{45}$ ☐ $<$
☐ $>$
☐ $=$ $\sqrt{48}$

4. $\sqrt[3]{-216}$ ☐ $<$
☐ $>$
☐ $=$ $-\left(\frac{\sqrt{144}}{-2}\right)$

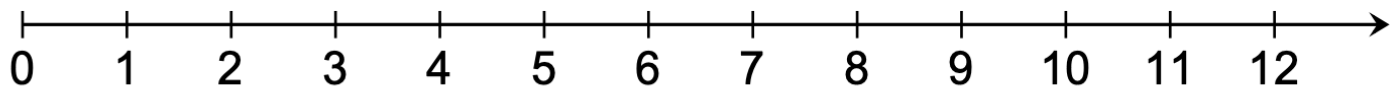

5. 5π ☐ $<$
☐ $>$
☐ $=$ $-2 + \sqrt{300}$

6. $\sqrt[3]{100}$ ☐ $<$
☐ $>$
☐ $=$ $\frac{9}{2}$

7. Order the following values from least to greatest.

$$\sqrt[3]{530}, \sqrt{48}, \pi, \sqrt{121}, \sqrt[3]{27}, \frac{19}{2}$$

8. Plot and label each value from the previous question on the number line.

For questions 9-10, order each set of numbers from least to greatest.

9. $3\pi - 1, \sqrt{70}, \frac{123}{15}$

10. $\sqrt[3]{-212}, -2\pi, -5\frac{15}{30}$
