

Grade 7 Accelerated
Unit 1
Lesson 1 Practice

Name Answer Key
Date _____
Period _____

1. In order to rewrite a fraction as a decimal,

- ☐ multiply or divide by 100.
- ☒ divide the numerator by the denominator.
- ☐ create an equivalent fraction with a denominator of 100.
- ☐ use the place value of the last digit determine the denominator.

2. In order to rewrite a decimal as a fraction,

- ☐ multiply or divide by 100.
- ☐ divide the numerator by the denominator.
- ☐ create an equivalent fraction with a denominator of 100.
- ☒ use the place value of the last digit determine the denominator.

For questions 3-5, write each fraction in as an equivalent decimal. Then determine if it is terminating or repeating.

3. $\frac{27}{8} = \underline{3.375}$. This is a

- ☒ terminating decimal.
- ☐ repeating decimal.

4. $\frac{6}{11} = \underline{0.\overline{54}}$. This is a

- ☐ terminating decimal.
- ☒ repeating decimal.

5. $\frac{4}{5} = \underline{0.8}$. This is a

- ☒ terminating decimal.
- ☐ repeating decimal.

6. The decimal equivalent of the rational number $\frac{59}{11}$ is 5.3636... This can be expressed in bar notation as _____.

- A. $\underline{5.36}$
- ☒ B. $5.\underline{36}$
- C. $5.\underline{3}\underline{6}$
- D. 5.36

7. The decimal equivalent for $\frac{5}{11}$ is $0.\overline{45}$.

Use your decimal equivalent found in question 7 for questions 8-10. Predict the decimal equivalent for each fraction. Use bar notation for all repeating decimals.

8. $2\frac{5}{11} = 2.\overline{45}$

9. $\frac{10}{11} = 0.\overline{90}$

10. $\frac{87}{11} = \boxed{7} \frac{\boxed{10}}{11} = 7.\overline{90}$
