Lesson 7 Practice

Name Answer Key
Date _____
Period _____

Audrey gives each of her 6 closest friends a \$20 gift card to their favorite store along with a small amount of cash during the holiday season. She spends the same amount of money on each of her friends. If she spends \$360 each year on holiday gifts for her 6 closest friends, how much cash does she give each friend?

1. Define the variable.

c = amount of cash given to each of Audrey's friends

2. Write an equation that can be used to answer the question.

$$6(20 + c) = 360$$

3. Solve the equation.

$$\frac{6(20 + c)}{6} = \frac{360}{6}$$

$$20 + c = 60$$

$$c = 40$$

4. Explain the meaning of the solution.

Audrey gives \$40 to each of her friends.

5. Does the solution make sense for the problem? Why or why not?

Yes, Audrey gives a \$20 gift card plus \$40 to each of her six friends, spending a total of \$360.

Terri and Mary Ellen are members of a Drama Club at school who are participating in a candy bar fundraiser for a club trip. Terri sold 9 fewer candy bars this week than she did last week. She sold 4 times as many candy bars as Mary Ellen this week. Mary Ellen was only able to sell 25 candy bars this week. How many candy bars did Terri sell last week?

6. Define the variable.

c = number of candy bars Terri sold last week

7. Write an equation that can be used to answer the question.

$$c - 9 = 4 \cdot 25$$

8. Solve the equation.

$$c - 9 = 4 \cdot 25$$

$$c - 9 = 100$$

$$c = 109$$

9. Explain the meaning of the solution.

Terri sold 109 candy bars last week.

10. Does the solution make sense for the problem? Why or why not?

Yes, Terri sold 109 candy bars last week. This week she sold 100 candy bars, which is four times the number Mary Ellen sold.
