

Grade 6 Accelerated
Unit 14
Lesson 5 Practice

Name _____
Date _____
Period Key

Write and solve an algebraic equation for each of the following.

1. Rhonda ate 8 peanut M&M's, which is 6 less than her daughter, Diana ate. How many peanut M&M's did Diana eat?

$$\begin{aligned}x - 6 &= 8 \\x &= 14 \text{ m\&ms}\end{aligned}$$

2. Cathy reviewed her monthly spending and found that she reduced her monthly spending on coffee by \$32 from the prior month. If her monthly spending on coffee was \$108, how much did she spend on coffee in the prior month?

$$\begin{array}{r}m - 32 = 108 \\+ 32 \quad + 32 \\ \hline m = 140\end{array} \quad \$140$$

3. Marcus gained 350 new followers on social media after his article was published. If he now has 3,425 followers, how many did he have before the article was published?

$$\begin{array}{r}f + 350 = 3425 \\- 350 \quad - 350 \\ \hline f = 3075 \text{ followers}\end{array}$$

4. Fischer has a goal of making \$120 in tips before the end of his shift. If he already has earned \$91, how much more does he need in order to meet his goal?

$$\begin{array}{r}T + 91 = 120 \\- 91 \quad - 91 \\ \hline T = 29\end{array} \quad \$29$$

5. Darlene collected 28 cans for a food drive, which was 12 less than the prior day. How many cans did she collect the prior day?

$$\begin{array}{r}C - 12 = 28 \\+ 12 \quad + 12 \\ \hline C = 40 \text{ cans}\end{array}$$

6. Bruno earned \$19.50 for washing the family car, bringing his total amount of savings to \$66.20. How much did Bruno already have saved before washing the car?

$$B + 19.50 = 66.20$$
$$B = \$46.70$$

7. Xin ran 18.25 miles less than her friend Kelly ran last week. If Xin ran 22.9 miles, how many miles did Kelley run?

$$K - 18.25 = 22.90$$
$$K = 41.15 \text{ miles}$$

8. After paying cash for dinner, Daniel received \$9.91 back as change. If the total of the bill was \$40.09, how much did Daniel give the waiter to pay the bill?

$$X - 9.91 = 40.09$$
$$X = \$50$$

9. Alyssa beat her high score by scoring 9,241 points more than her previous high score. If her original high score was 104,560 points, what is her new high score?

$$h = 104560 + 9241$$
$$h = 113,801 \text{ points}$$

10. A streaming service recently lost 4,500 subscribers. If they originally had 92,000 subscribers, how many subscribers do they have now?

$$92000 - 4500 = x$$
$$x = 87,500 \text{ subscribers}$$
