Quarter 1 Summary of Instructional Units

Units are linked to the SCPS Frameworks site. Bolded benchmarks are assessed on the current quarter assessment. The benchmarks that are not in bold may be assessed in the following quarter.

Unit 1A - Operations with Rational Numbers	With 9 lessons over 11 recommended instructional days, this unit covers benchmarks MA.7.NSO.2.1 , MA.7.NSO.2.2 , and MA.7.NSO.2.3 . These lessons come from Unit 11 of the 6th Accelerated curriculum to support students moving from RAMP 5 (6th grade benchmarks) to RAMP 6 (7th Accelerated benchmarks).
--	--

	In this unit, students begin working on their fluency with operations with rational numbers in mathematical contexts. Students then extend this to problem solving in real-world contexts with all rational numbers. In Unit 6, students were focused on fluency with operations with positive rational numbers and with integers, as well as problem solving in real-world contexts with these numbers. This extends that fluency to include all rational numbers. Students will also practice performing operations with rational numbers through the process of evaluating expressions using the order of operations.
Unit 1B - Equations and Inequalities	With 12 lessons over 15 recommended instructional days, this unit covers benchmarks MA.7.NSO.1.2, MA.7.AR.2.2, MA.7.AR.2.1, and MA.8.AR.2.2. This unit includes 2 lessons from Unit 14 of the 6th Accelerated curriculum to support students moving from RAMP 5 (6th grade benchmarks) to RAMP 6 (7th Accelerated benchmarks). In this unit, students engage in writing and solving two-step equations and inequalities in mathematical and real-world contexts. In Section 1, students are introduced to repeating decimals and learn how to convert from fractions to repeating decimals and from repeating decimals to fractions. Section 2 extends students’ prior knowledge of solving one-step equations as they explore solving two-step equations using the properties of equality. Section 3 focuses on inequalities. This unit lays the foundations for Unit 11 where students will learn to solve multi-step linear equations and systems of two linear equations.
Unit 2 - Rational and Irrational Numbers	With 6 lessons over 8 recommended instructional days, this unit covers benchmarks MA.8.AR.2.3, MA.8.NSO.1.1, and MA.8.NSO.1.2. In this unit, students develop an understanding of irrational numbers as they continue their exploration of the real number system. In Section 1, students explore the geometric representation, algebraic notation, and verbal descriptions of perfect squares and square roots. Then they explore the geometric representations, algebraic notation, and verbal descriptions of perfect cubes and cube roots. Students solve equations in the form $x^2=p$ and $x^3=q$, where p is a whole number and q is an integer. They also learn to find the values of square roots and cube roots. In Section 2, students extend their knowledge of rational numbers to define and explore irrational numbers. Students use their knowledge of finding the square and cube roots of perfect squares and cubes to approximate non-perfect square and cube roots. They finish the unit by plotting, comparing, and ordering rational numbers and the approximated values of irrational numbers on a number line.
Unit 3 - Exponents	With 7 lessons over 10 recommended instructional days, this unit covers benchmarks MA.7.NSO.1.1 and MA.8.NSO.1.3. <i>While instruction on this unit takes place at the end of Quarter 1, this unit will not be assessed on the Quarter 1 Benchmark Assessment.</i> In this unit, students are introduced to the laws of exponents and learn to use them to evaluate numeric expressions. Section 1 focuses on the laws of exponents, their definitions, and their applications with whole number exponents. In this section, the laws of exponents are broken into two categories: product exponent laws and quotient exponent laws. With product laws of exponents, students learn about the product of powers, power of a product, power of a power, and identity exponent law. With quotient laws of exponents, students are introduced to quotient of powers, power of a quotient, and zero exponent laws. Students conclude this section by evaluating numeric expressions and generating equivalent expressions by applying the laws of exponents. In Section 2, students extend the laws of exponents to include integer exponents as they explore negative exponents. Students apply the laws of exponents to evaluate numerical expressions in addition to generating equivalent expressions. Section 3, which covers scientific notation, is not included within the scope and sequence of the RAMP 6 course.
