

Grade 7
Unit 10
Lesson 4 Practice

Name _____
Date _____
Period _____

Using substitution, determine whether the given numerical value is part of the solution set of the inequality. Show your work.

1. Is $p = 12$ part of the solution set for $8p \geq 96$?

2. Is $k = 1$ part of the solution set for $\frac{k}{4} > 1$?

Use the inequality $\frac{x}{-6} < 7$ to complete the following.

3. Complete the inequality to create an equivalent inequality.

x _____

4. Graph the solution set for $\frac{x}{-6} < 7$

5. Find the solution to both inequalities using the multiplication property of inequality.

$-\frac{p}{4} \leq 15$	$\frac{p}{4} \leq 15$
------------------------	-----------------------

6. Find the solution to both inequalities using the division property of inequality.

$7y < -105$	$-7y < -105$
-------------	--------------

Solve each inequality. Then, graph its solution set.

7. $-\frac{c}{2} < -1.5$

8. $-4x > 52$

9. $5x \leq -55$

10. How is the process of solving an inequality with a negative coefficient similar to the process of solving an inequality without a negative coefficient?
