

Grade 7
Unit 11
Lesson 6 Practice

Name _____
Date _____
Period _____

A soccer player tracked their goals throughout the most recent soccer season. He scored 20 goals over a total of six games. This data is outlined in the table below.

Game	Goals scored
1	6
2	4
3	3
4	1
5	2
6	4

1. Does the data show a proportional relationship between goals scored and games? Explain.

A recipe for enchiladas shows that 9 cups of pinto beans will produce 3 servings of enchiladas.

2. How many servings will 1 cup of pinto beans produce?

3. Complete the following table.

Cups of Pinto Beans (x)	Servings (y)
1	
6	
9	3
12	
15	

4. Write an equation that could be used to find the number of servings, y , that any number of cups of pinto beans, x , could produce.
5. What is the constant of proportionality?
6. Using the same enchilada recipe, complete the following table based on servings and number of enchiladas.

Number of enchiladas (x)	Number of servings (y)
1	
4	2
16	
24	
30
