

Ronaldo wanted to know how many minutes of exercise his friends did each week. His data is shown in the dot plot below.

Minutes

1. Explain which measure of center, the mean or the median, best describes the center of the data.
2. Find the value of the measure you chose in question 1.
3. Describe the variation of the weekly exercise times.
4. Does the IQR or the range, better represent the variation in exercise times? Explain your reasoning.

Mr. Arias gave his students a quiz in the afternoon. His students' scores are shown in the box plot shown below.

5. Which measure of center best summarizes the data?
6. Which measure of variation should Mr. Arias use to best summarize his data? Explain your reasoning.
7. Mr. Arias determined taking a test in the afternoon was good for his students. Do you agree or disagree? Explain your reasoning.

Gia decided to record the amount of time it took her friends to get to school from their houses. The times are shown in minutes.

19, 36, 12, 23, 45, 2, 17, 20

8. What measure of center best describes the typical amount of time it takes Gia's friends to get to school? Explain your reasoning.
9. By looking at the data, Gia thinks that range best summarizes the variation of the data. Do you agree with her?
10. Which measure of variation best describes the typical amount of time it takes Gia's friends to get to school? Explain your reasoning.
