

College students were polled about their favorite type of pizza. They were given a choice of cheese, pepperoni, sausage, and veggie. The results are shown in the table below. Use this information to complete problems 1-5. Round to the nearest whole percent.

- What is the probability that a randomly chosen junior will pick cheese as their favorite type of pizza?
- What is the probability that a randomly selected student that is a freshman or Sophomore will pick cheese as their favorite type of pizza?

- The probability of a sophomore choosing sausage pizza is about _____%

☐ more
☐ less

 than a sophomore choosing pepperoni pizza.
- The probability of a sophomore choosing veggie pizza is about _____ %

☐ more
☐ less

 than a junior choosing veggie pizza.
- A pizza vendor decides to bring more cheese than pepperoni pizza to sell at freshman orientation. Explain whether this is a good business decision based on the graph.

6. Match the probabilities with the event described. Draw a line from the event to the probability of it occurring.

Event	Probability that the Event will Occur
A six-sided dice lands on a 4.	50%
A class had 16 girls and 18 boys. What is the probability that the teacher picks a girl to lead the class to lunch?	16.7%
A bag has 10 purple marbles, 6 black marbles, and 4 red marbles. If marbles are chosen at random, what is the probability that a purple marble is chosen?	47.1%

Students in Mrs. Dobson's class took their Unit 3 Science test on Monday. The pie graph shows the number of students that earned each grade. Use the information in the graph to answer questions 7-10.

7. What percentage of students earned a D?
8. What percentage of students earned a B?
9. If Mrs. Dobson's students score in the same manner for the Unit 4 test, what is the probability that students will not earn an A or B?
10. Based on the data, explain whether students should be worried about passing the Chapter 3 test with a grade of C or higher?
