

Figure S was scaled down and drawn as Figure T. Each square represents a width of 8 units. Use this information to complete problems 1-5.

1. Label 3 pairs of corresponding sides from the original to the scaled down drawing lines from Figure S to Figure T.

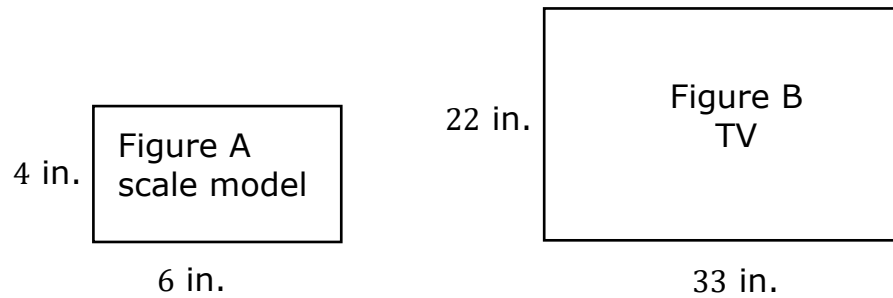

2. What is the scale factor from Figure T to Figure S?

3. What scale factor takes Figure S to Figure T?

4. What is the estimated perimeter of Figure S?

5. What is the ratio of the perimeter Figure T to the perimeter of Figure S?

Shannon draws a scale model of her TV screen, Figure A, with a width of 6 in. and height of 4 in. Her actual TV, Figure B, has a width of 33 in. and height of 22 in. Use this information to complete problems 6-10.

6. What is the scale factor from Figure A to Figure B?
7. What is the perimeter of Shannon's scale model?
8. What is the perimeter of Shannon's TV?
9. What is the ratio of the perimeter of Shannon's scale model to her actual TV?
10. How does the scale factor from Shannon's actual TV to the scale model compare to the scale factor from her scale model to her actual TV? Explain.
