

Grade 7
Unit 5
Lesson 7 Practice

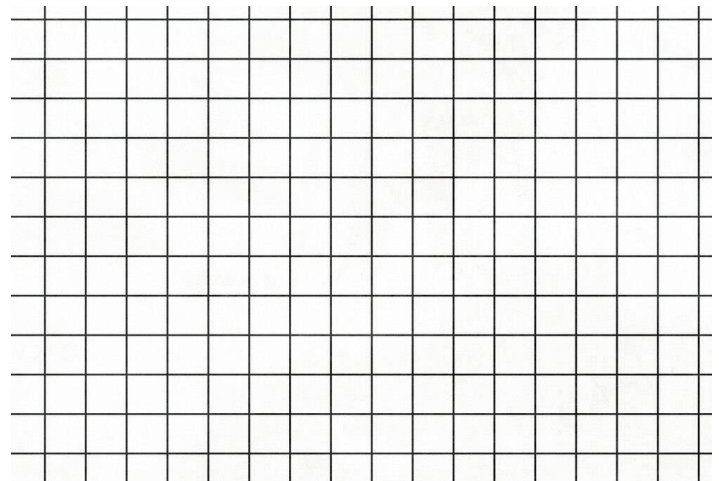

Name _____
Date _____
Period _____

1. The regulation size for a high school basketball court is 84 feet long by 50 feet wide. The foul line is 19 feet from one side of the court. Johnny wants to create a scale drawing of his middle school's regulation basketball court. What steps should Johnny take to draw his scale model?

2. Using a scale factor of $\frac{1}{6}$ create a scale drawing of Johnny's high school regulation basketball court.

Scale drawing of the: _____

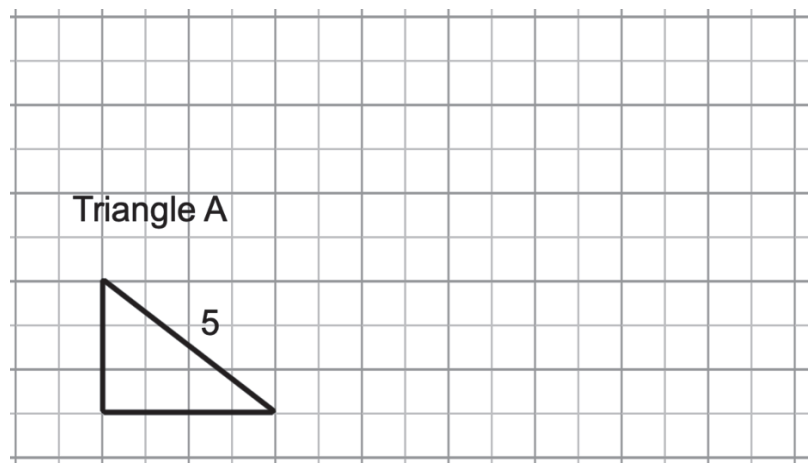

3. For your scale drawing in #2, one gridline = _____
4. How would your drawing in #2 change if a scale factor of $\frac{4}{5}$ were used instead of $\frac{1}{6}$?
5. When creating a scale drawing of a court, property, or statue, why is it important to use a scale factor that is a fraction less than 1?

6. A scale on a treasure map shows that 3 centimeters represent 8 meters. The treasure is 200 meters from the starting point. How many centimeters (on the map) are represented by the distance from the starting point to the treasure?
7. A scale on a map of Florida shows that 1 inches represent 5 miles. Johnny measures the distance from Tallahassee to Orlando (on the map) as 51.2 inches. Based on this map, how many miles is Tallahassee from Orlando?

Triangle A is shown below. The slanted side of the triangle equals 10 cm. Each gridline represents 2 centimeters (cm). Use this figure to answer questions 8-10.

8. Draw a scaled copy of Triangle A that has a perimeter of 84 cm.

9. What is the scale factor of the drawing in #8.
10. How would the drawing and scale factor change if the perimeter of the copy was decreased to 25.2 cm?
