

Grade 7
Unit 5
Lesson 8 Practice

Name _____
Date _____
Period _____

A scale drawing of the school's football field was drawn with a scale of 2 cm to 52 feet. Each gridline equals 2 cm. Use this drawing to answer questions 1-5.

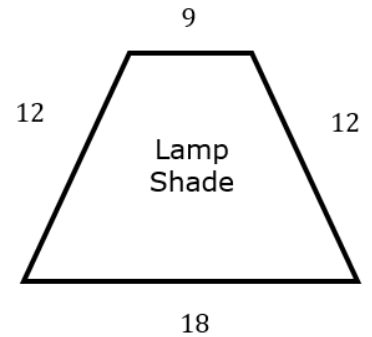

1. Find the dimensions of the scale drawing (width and length).

2. Find the dimensions of the actual football field (width and length).
3. Compare the perimeter of the scale drawing to the perimeter of the actual football field.
4. Determine a ratio that compares the width of the scale drawing to the width of the actual football field.
5. Determine a ratio that compares the perimeter of the scale drawing to the perimeter of the actual football field.

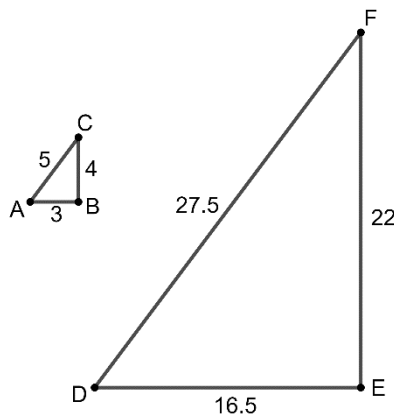

Terrica wants to buy a lamp shade to match her bedroom. The measurements of the lamp (in inches) are shown below. Terrica wants to create a scaled drawing of the lamp using a scale factor of $\frac{1}{4}$. Use the figure to answer questions 6-7.

6. Find the dimensions of the scaled drawing of the lamp.

7. How does the perimeter of the scaled drawing compare to the perimeter of the actual lamp?

The dimensions of Triangle ABC and Triangle DEF are shown in the figure below (in centimeters). Use the figure to complete questions 8-10.

8. Find the ratios of 2 corresponding sides of Triangle ABC and Triangle DEF .

9. Find the ratios of the perimeters of Triangle ABC and Triangle DEF .

10. Use the ratios in number #8 and #9 to determine if the triangles are examples of scale models. Explain your answer.
