

Grade 7
Unit 6
Lesson 4 Practice

Name _____
Date _____
Period _____

Converting from Customary to Metric
1 ounce = 28.4 grams

Within the Customary System
1 pound = 16 ounces

Converting from Metric to Customary
1 kilogram = 2.2 pounds

Within the Metric System
1 kilogram = 1000 grams

A recipe was written in metric units. Determine the amount of each ingredient in U.S. Customary measurements. Round to the nearest thousandth.

1. 260 grams light brown sugar = _____ ounces

2. 0.575 kilograms of flour = _____ pounds

A recipe was written in US Customary measurements. Convert to metrics, rounding to the nearest thousandth.

3. 16 ounces of chocolate chips = _____ grams

4. 0.75 pounds of sugar = _____ grams

5. If 1 kilogram = 1000 grams, and 1 kilogram = 2.2 pounds, how many grams is equal to 26 pounds?

Use the conversions below for 6-8. Round to the nearest thousandth.

$$1 \text{ ft} = 0.305 \text{ meters (m)}$$

$$10.764 \text{ square feet} = 1 \text{ square meter}$$

6. A floorplan of a house shows the office as having dimensions 12 feet $\times$ 10 feet. Find the area of the office in square meters.

7. The same floorplan has a closet that is 5 feet by 7 feet. What is the area in square meters?

8. The master bedroom of the house is 15.6 square meters. Find the area in square feet.

Using the unit conversions below, determine the missing values for 9-10. Round to the nearest thousandth.

$$1000 \text{ acres} = 1.5625 \text{ square miles}$$

$$100 \text{ acres} = 0.405 \text{ square kilometers}$$

9. 57 acres = _____ square miles

10. 92 square kilometers = _____ acres
