

A circle with four noncongruent sectors is shown.

Use your protractor to measure the angle of each sector. Then, complete the information. Round your answers to the nearest whole number.

1. Sector A:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

2. Sector B:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

3. Sector C:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

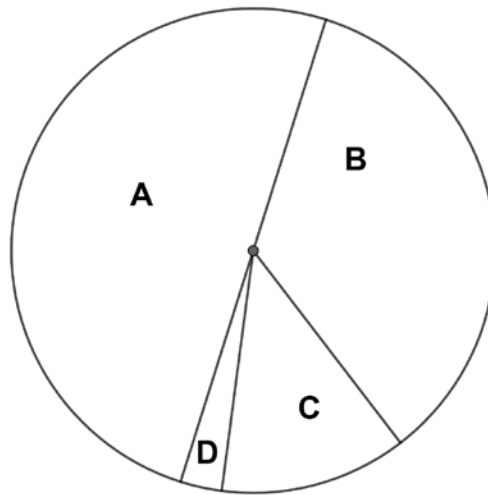

4. Sector D:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

A circle with four noncongruent sectors is shown.

Use your protractor to measure the angle of each sector. Then, complete the information. Round your answers to the nearest whole number.

5. Sector A:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

6. Sector B:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

7. Sector C:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

8. Sector D:

Central Angle Measure in Degrees: _____

Ratio of Angle Measure to 360° : _____

Percentage of the Circle: _____

Complete the statements. Round your answer to the nearest whole.

9. The measure of a central angle if the percentage of the circle is 68% is _____.

10. The percentage of a circle if the central angle measures 47° is _____.
