

Grade 7
Unit 7
Lesson 5 Practice

Name _____
Date _____
Period _____

1. A store is having a storewide $\frac{1}{4}$ off sale. What is the amount saved on an item that costs \$8.42?

2. John bought a dented refrigerator because it was discounted $\frac{7}{20}$ off the original price of \$826. What was the reduced price, in dollars?

3. A used laptop sells for \$350. The laptop was marked up 63% before selling it. What was the wholesale cost of the laptop?

4. The owner of a fast-food restaurant chain spends \$4.75 making a burger and then adds 110% markup to sell the burger. Calculate the selling price of the burger.

5. A company produces an item for \$168.75. The item is then marked up 66%. What is the selling price of that item?

6. A clothing store sells a t-shirt for \$17.30, which is 18% off the original price. Calculate the original price of the t-shirt.
7. A skateboard is 25% off and with a sale price of \$37.60. What is the original price of the skateboard?
8. The price of a new catchers' equipment bag is \$280.67. If it is 18% off, how much is the total cost?
9. A store sells BMX bicycles for \$589.75 after a $\frac{2}{10}$ markup. How much is the markup?
10. A restaurant sells its famous soup for \$3.76. The restaurant added a markup of $\frac{17}{10}$ to the cost of the soup. Find the cost of how much the restaurant pays for making the soup.
