

Grade 7
Unit 7
Lesson 8 Practice

Name _____
Date _____
Period _____

1. How much interest would an investment of \$4,850 during a 4-year period with a 3% simple interest rate make?

2. An amount of \$780 is put into a savings account. The savings account has a 4% simple interest rate. How much money would the account have by the end of 4 years if no money is withdrawn?

3. How much money would an investment of \$6,860 during a 3-year period with a 5% simple interest rate make?

Use the following for question 4-5.

An amount of \$520 is put into a savings account. The account has a 3% simple interest rate.

4. How much interest would the account have by the end of 8 years.

5. What is the total amount in the account after 8 years if no money is withdrawn?

6. Gil invests \$3,700 for 10 years at a simple interest rate of 3%. How much will be in the account at the end of the 10 years?

Use the following for question 7-10.

Gloria is taking out a 7-year loan to buy a new car. Her loan is \$38,000 with a 4% simple interest rate.

7. How much interest, in dollars, will Gloria have to pay over the seven years?
8. How much interest, in dollars, will Gloria have to pay annually?
9. What is the total amount Gloria will have to pay back at the end of the 7-year loan?
10. Gloria has the option of taking out a 5-year loan with a 5% simple interest rate instead. Which option would she have to pay back the least amount of money at the end of the loan? Explain.
