

Grade 7
Unit 9
Lesson 6 Practice

Name _____
Date _____
Period _____

1. Rewrite the expression $5 + (8 + 4)$ using the commutative property.
2. Rewrite the expression $5 + (8 + 4)$ using the associative property.
3. Rewrite the expression $5 + (8 + 4)$ using the distributive property.

Problems 4-6 are equivalent to the expression $2 + (8 + 6) - (4 + 5) + 1$.

Without evaluating, determine which property (commutative, associative, or distributive) was used to re-write the expression $2 + (8 + 6) - (4 + 5) + 1$.

4. $(2 + 8) + 6 - (4 + 5) + 1$

5. $2 + (6 + 8) - (4 + 5) + 1$

6. $2 + 8 + 6 - 4 - 5 + 1$

Determine whether the expressions are equivalent. If they are not, rewrite the second expression to make the expressions equivalent.

7. $7 - (2.9 + 8)$

8. $\left(2.6 + \frac{4}{9}\right) + 5$

$7 - 2.9 + (-8)$

$5 + \left(2.6 + \frac{4}{9}\right)$

9. $\left(\frac{1}{8} \times 3\frac{1}{5}\right) \times \frac{1}{5}$

10. $(15 - 3) - (6 + 8)$

$\frac{1}{8} \times \left(3\frac{1}{5} \times \frac{1}{5}\right)$

$(15 - 6) + 3 - 8$
