

Grade 7
Unit 10
Lesson 1 Practice

Name _____ Answer Key _____
Date _____
Period _____

1. For each inequality, write three numbers that could represent the solution set.

Answer may vary.

a. $\frac{1}{2} < p$ $\frac{3}{4}, 1, 3$

b. $-3 \leq g$ $-2, 0, 4$

c. $w < 10$ $9, 0, -1$

2. You have to be at least 18 years old to see the new scary movie at the movie theater. Write an inequality to represent the ages that one can be to see the scary movie in the theater. Let a represent the age.

$a \geq 18$

3. Graph the solution $16 \leq x$.

4. Stephanie states that the numbers (6, 8, 10) are in the solution set for the inequality $6 \geq t$. Explain why Stephanie's answer is not accurate.

6 is equal to t , but 8 and 10 are greater than 6 .

5. Compare and contrast the two number lines.

The first number line is greater than or equal to -2 and the second is greater than -2 .

6. Match each inequality with the graph that represents all the values of x that makes it true.

Inequality	Graph
$-3 < x$	
$x > 50$	
$x - 2 \geq 48$	
$-3 \geq x$	
$5 \leq x$	

7. Tiffany has \$425 in her checking account. She wants to buy a new pair of running shoes while leaving at least \$375 in her account. Write an inequality to represent this situation. Let x represent the cost of the running shoes.

$$425 - x \leq 375$$

8. You must be at least 44 inches tall to ride Space Mountain at Walt Disney World. Write an inequality to represent this situation and graph the solution.

$$x \geq 44$$

9. A value that is a part of a mathematical solution set that does not make sense within the context of the problem is called

constraint

10. What do we call inequalities that have the same solution set?

Equivalent inequalities
