

Grade 7
Unit 13
Lesson 1 Practice

Name Answer Key
Date _____
Period _____

Mrs. Nelson randomly picked some of her students to ask how many minutes a day they spend talking on their phones. The data set is shown below.

134	246	79	115	203
47	98	50	0	111

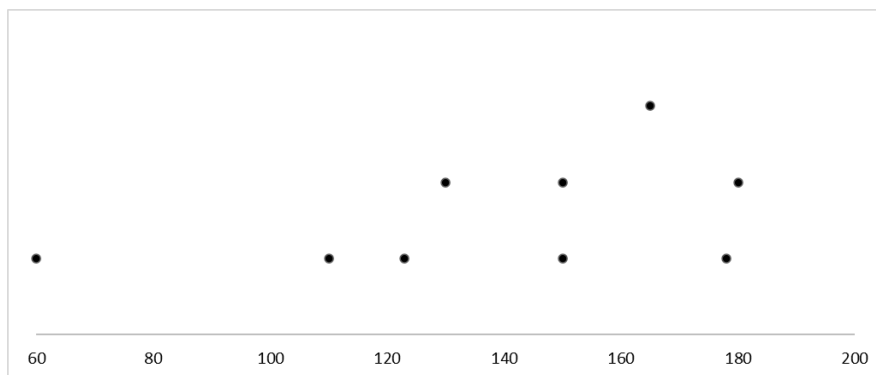

Match the measures of spread and variation with their calculations for the data set in questions 1-4.

A. Median	B. Mean	C. IQR	D. Range
-----------	---------	--------	----------

1. D	$246 - 0 = 246$
2. A	$\frac{98 + 111}{2}$
3. C	$134 - 50 = 84$
4. B	$\frac{134 + 246 + 79 + 115 + 203 + 47 + 98 + 50 + 0 + 111}{10}$

Jasmine wanted to know how long her classmates had traveled to go on vacation during spring break. Below is a list of their travel times and a dot plot displaying the data for questions 5-8.

60, 110, 123, 130, 150, 150, 165, 178, 180

5. Determine the mean and median of the data set.

mean: $\frac{1246}{9} \approx 138.4$

median: 150

6. What is the range of the data set?

$$180 - 60 = 120$$

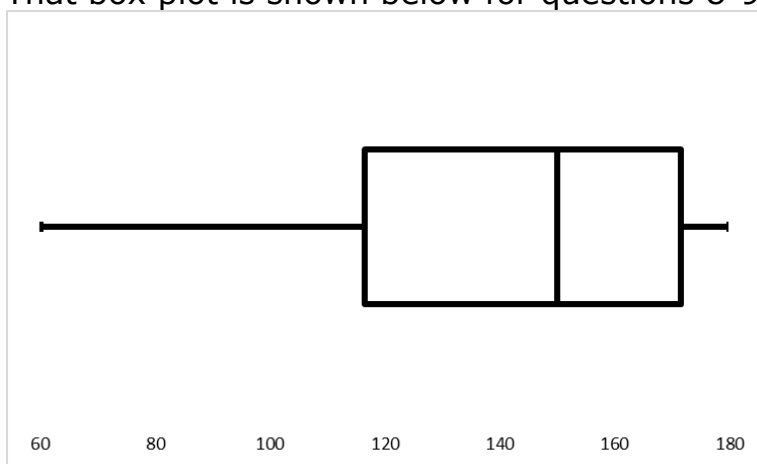

7. What is the IQR of the data set?

$$171.5 - 116.5 = 55$$

8. Is there an outlier in the data set? If the outlier was removed, how would it effect the mean of the data?

Yes, 60. The mean would increase.

Jasmine also decided to create a box plot of the data she collected about travel times during spring break. That box plot is shown below for questions 8-9.

9. What measure(s) of center can be determined from the box plot?

median

10. What measure(s) of variation can be shown by the box plot?

IQR and range
