

Janiyah wants to create a graph of how many pets her classmates have. The number of pets her classmates have is listed below.

6	0	1	5	2	3	7	15	3	3
4	9	2	1	0	0	8	4	1	2
7	6	2	2	1	1	6	5	3	2

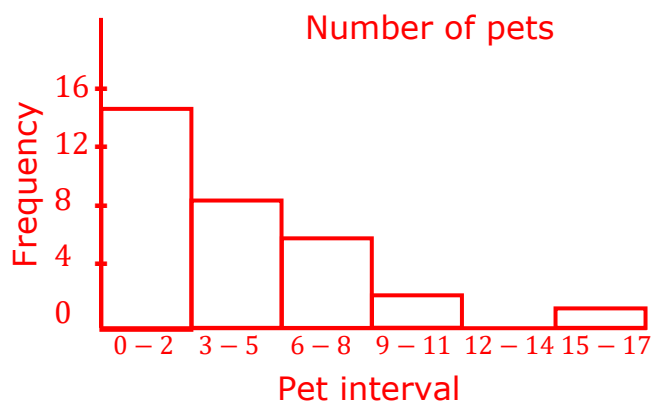

1. What graphical representation would be the best way to show the data?

A histogram

2. Explain your reasoning for choosing that display type.

A histogram can be used to see the shape of the data set and the frequencies of students and the number of pets they all have.

3. Create the graph based on the representation you chose above.

Christopher wanted to see how long he spent on each app on his cell phone compared to his overall screen time of 225 minutes. The amount of time he spent on each app is shown below.

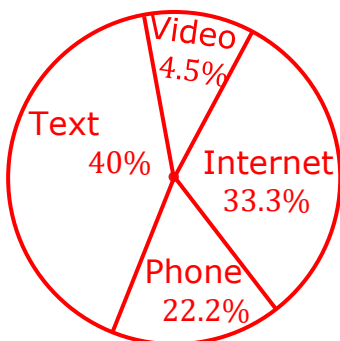

4. Complete the table below to determine the percentage of time he spent on each app.

App	Time Spent (in minutes)	Percentage of time spent on app
Internet	75	33.3%
Text Messaging	90	40.0%
Phone Calls	50	22.2%
Video Calls	10	4.5%

5. What graphical representation would be the best used to show this graph? Explain your reasoning.

A circle graph so Christopher can see how much time he spends on each app compared to his total screen time.

6. Create the graph based on the representation you chose above.

7. What app did Christopher use the most?

Text messaging

8. What app did Christopher use the least?

Video calls

9. What type of graphical representation is best used when visualizing how each category compares to the whole?

Circle Graph

10. What graphical representation is best used when visually showing how each part compares to other parts and displaying the exact counts or values for each category?

Bar Graph
