

The Jones family has 4 children and want one more child to complete their family. $\frac{3}{4}$ of the children are boys and the rest are girls.

1. What is the probability that the next child will be a boy, represented as a percent rounded to the nearest hundredth?

$$\frac{1}{2} = 0.5 = 50\%$$

2. What is the theoretical probability that the next child will be a boy?

$$\frac{1}{2}$$

Describe how each of the following can be used to simulate if the next child will be a boy.

3. A spinner with 8 equal sections

Answers may vary.

Mark half the sections for "boy" and half for "girl"

4. A twelve-sided die

Answers may vary.

Even numbers represent boy, odd numbers represent a girl.

5. A bag with 60 marbles

Answers may vary.

Choose $\frac{1}{2}$ to represent a boy and $\frac{1}{2}$ to represent a girl.

Spinning a spinner with 4 equal sized sections, one for each blood type.
