Unit 7  
Lesson 3 Practice

Name \_\_\_\_\_  
Date \_\_\_\_\_  
Period \_\_\_\_\_

A town is planning on putting a new brand on all modes of transportation. The town is surveying local people about their favorite mode of transportation. The town received 780 responses and compiled the data into the table shown.

| Transportation | Number of people who selected that transportation |
|----------------|---------------------------------------------------|
| Bus            | 200                                               |
| Cab            | 165                                               |
| Subway         | 415                                               |

Use the data to complete each question. Round all values to the nearest whole number.

- Bus to total responses ratio:  $\frac{200}{780}$
- Bus to total responses percentage:  $26\%$
- Bus to total responses angle measure ( $^{\circ}$ ):  $92^{\circ}$   
 $\frac{200}{780} = \frac{x}{360}$   $72000 = 780x$   $x = 92.3$
- Cab to total responses ratio:  $\frac{165}{780}$
- Cab to total responses percentage:  $21\%$
- Cab to total responses angle measure ( $^{\circ}$ ):  $76^{\circ}$   
 $\frac{165}{780} = \frac{x}{360}$   $59400 = 780x$   $x = 76.2$
- Subway to total responses ratio:  $\frac{415}{780}$
- Subway to total responses percentage:  $53\%$
- Subway to total responses angle measure ( $^{\circ}$ ):  $192^{\circ}$   
 $\frac{415}{780} = \frac{x}{360}$   $149400 = 780x$   $x = 191.5$

10. Use the previous data and a protractor to construct a circle graph.
