Quarter 3 Summary of Instructional Units

Units are linked to the SCPS Frameworks site. Bolded benchmarks are assessed on the current quarter assessment. The benchmarks that are not in bold may be assessed in the following quarter.

Unit 9 - Surface Area and Volume	With 5 lessons over 9 recommended instructional days, this unit covers benchmarks MA.7.GR.2.1 , MA.7.GR.2.2 , and MA.7.GR.2.3 .
----------------------------------	--

	Unit 9 consists of five lessons designed to facilitate students in developing an understanding of surface area and volume of right circular cylinders. While this is not the only unit in Grade 7 Accelerated Math that addresses Geometry (GR) benchmarks, Unit 9 is the only unit in which students engage with concepts of surface area and volume. Students learned to find the surface area and volume of rectangular prisms and pyramids in Grade 6 Accelerated Math. Then in Unit 8 of this course, students were introduced to finding the circumference and area of circles. This unit builds from students’ new knowledge of the area of a circle and prior knowledge of surface area and volume to extend to three-dimensional figures with circular bases, cylinders.
Unit 10 - Linear Relationships	With 10 lessons over 13 recommended instructional days, this unit covers benchmarks MA.8.AR.3.1, MA.8.AR.3.2, MA.8.AR.3.5, MA.8.AR.3.4, and MA.8.AR.3.3. Unit 10 builds on students’ prior work in Unit 7 with the tables, graphs, and written descriptions of a proportional relationships. Students transition from learning about linear relationships in terms of constant of proportionality to determining and interpreting slope, graphing lines, and writing the slope-intercept forms of linear equations. Students work with multiple representations of linear relationships, including tables, graphs, and equations, throughout the unit. Students also interpret linear relationships in real-world contexts throughout the unit.
Unit 11 - Solving Equations and Systems of Equations	With 8 lessons over 11 recommended instructional days, this unit covers benchmarks MA.8.AR.2.1, MA.8.AR.4.1, MA.8.AR.4.2, and MA.8.AR.4.3. In this unit, students will solve multi-step linear equations with variables in one variable and be introduced to systems of two linear equations. Instruction will focus on students using properties of equality and properties of operations. In Unit 1, students learned to solve two-step linear equations in one variable where all numbers were rational numbers. In Unit 11, this extends to solving multi-step equations, including those with variables on both sides of the equation. This builds toward Algebra 1, where students will write and solve multi-step equations for real-world contexts.
Unit 12 - Functions	With 9 lessons over 11 recommended instructional days, this unit covers benchmarks MA.8.F.1.1, MA.8.F.1.3, MA.8.F.1.2, and MA.8.AR.2.3. Prior to this unit, students have analyzed and represented many relationships. After this unit, students write and solve one-variable multi-step linear equations that represent real-world contexts. Students begin the unit distinguishing between relations and functions. Students explore the input and output pairs of relations, representing them in tables, mapping diagrams, and graphs. They draw connections between input values, independent variables, and x-values, as well as output values, dependent variables, and y-values. Then, students identify the domain and range of relations. Students learn how to determine if a relation, represented as a table, mapping diagram, and graph, is a function. Next, the focus shifts to graphing functions. Students sketch, interpret, and describe graphs of functional relationships. Subsequently, students transition into working with equations, tables, and graphs of functions and learn how to determine if the function is linear. <i>While this unit is not assessed on the Quarter 3 Benchmark Assessment, it is included in instruction per the Recommended Pacing Calendar within the SCPS Frameworks.</i>
